PREMIER CATALOG

PRE-ORDER DUE DATE: WEDNESDAY JUNE 8TH 2022

April 2022

Dear O Scale Model Railroader,

Welcome to the Spring 2022 Atlas O Premier Catalog. Since the Atlas acquisition of the majority of MTH's Premier line of locomotives and rolling stock molds, the team at Atlas has been working tirelessly to deliver the products announced in the first two Premier Catalogs. Several previously announced projects will be available in hobby shops this spring: GP-7 Locomotives, 45' Refrigerator Trailers, 3-Bay Cylindrical Hoppers, 50' Gunderson High Cube Box Cars, 40' PS1 Box Cars, Pullman Bradley 10-Window Coach Cars, 40' Rebuilt Wood Reefers, 40' GATX Airslide Hoppers and 33K Gallon Tank Cars. Concurrently, research and development has continued behind the scenes on additional products and we are happy to offer those announcements on the pages within!

Catalogs such as this one are the basis of Atlas' distinctive "guaranteed" pre-order system. Before the Research & Development department gives the final go ahead for production, Atlas announces to its customers the products we are preparing to make. This announcement comes in the form of our Atlas Model (HO & N) and Atlas O Premier Catalogs that provide our customers with the opportunity to arrange a guaranteed pre-order if placed by the given deadline. If possible, Atlas will try to fill orders placed after a given deadline, but these cannot be guaranteed. Occasionally, we offer 'Limited Availability' products for which we have speculated on order quantities and therefore these orders cannot be guaranteed. Either way, its best to place orders as soon as possible for your best chances at acquiring a selected product.

Atlas O continues the expansion of the O locomotive line with offerings of the Premier SD-70ACe and SD70M-2, as well as Premier S-2 Locomotives. All of these offerings will come equipped with MTH DCS, Proto-Sound 3.0!

This catalog includes the release of several rolling stock models in the Master and Premier lines including: Log Dump Cars, Centerflow Hoppers, Rebuilt Well Cars, Tank Cars and more - with authentic prototypical paint schemes. We're also announcing a new 40' PS-1 Box Car with a 6' Door. Rounding out the announcements are High Cube and Refrigerated Containers to transport and store all the goods on your layout! To remain updated on all Atlas O products and special announcements, sign up for the Atlas Insider Email at <https://shop.atlasrr.com>.

Happy Model Railroading,
Drew Postle, Atlas Sales Manager

The DC-motored SD70M-2 and AC-motored SD70ACe are EMD's hope for the future. While designed to meet the Environmental Protection Agency's Tier-2 emissions requirements that took effect on January 1, 2005, they also have a higher purpose: to recapture the lead in North American locomotive sales that EMD lost to General Electric in 1987.

Under the hood of both engines beats a third-generation model 710 diesel with 4300 horsepower; only slight modifications were needed to make the model 710 meet new emission standards. With 5000 such motors in service worldwide and a reputation for dependability, EMD reasoned that shop crews would prefer familiar technology.

Other than the prime mover, however, virtually every element of these engines has been re-thought to create a 21st century locomotive. The engines' angular nose offers the crew far better visibility than most other locomotives, and the cab is comfortable for engineers of almost any size and accommodates a crew of three — an important factor in a modern world without cabooses. Digital screens provide a range of information on what is happening both inside the locomotive and out on the road.

The key difference between the SD70M-2 and the SD70ACe is what's under the floor: traditional DC traction motors in the SD70M-2's trucks and AC traction motors in the SD70ACe. While AC traction motors put more tractive effort on the rails and enable an SD70ACe to start a heavier train with the same horsepower, that additional capability comes at a cost. AC-powered locomotives are both more expensive and more electrically complex than engines with DC traction motors, which most diesels have used since the 1940s.

PTC = Positive Train Control - PTC systems determine the precise location, direction and speed of trains, warn train operators of potential problems and safely bring the train to a stop if the operator does not act. Specifically, PTC technology is designed to prevent train-to-train collisions; derailments caused by excessive speed; unauthorized train movement onto sections of track where maintenance activities are taking place; and movement of a train through a track switch left in the wrong position. PTC will not prevent accidents caused as a result of track or equipment failure; improper vehicular movement through a grade crossing; trespassing on railroad tracks; or certain types of train operator error.

Features:

- Intricately Detailed Durable ABS Body
- Die-Cast Truck Sides, Pilots and Fuel Tank
- Metal Chassis
- Metal Handrails and Horn
- Moveable Roof Fans
- Metal Body Side Grilles
- Detachable Snow Plow
- (2) Handpainted Engineer Cab Figures
- Authentic Paint Scheme
- Metal Wheels, Axles and Gears
- (2) Remote Controlled Proto-Couplers
- O Scale Kadee-Compatible Coupler Mounting Pads
- Prototypical Rule 17 Lighting
- Directionally Controlled Constant voltage LED Headlights
- Lighted LED Cab Interior Light
- Illuminated LED Number Boards
- Operating LED Ditch Lights
- (2) Precision Flywheel-Equipped Motors
- Operating ProtoSmoke Diesel Exhaust
- Onboard DCC/DCS Decoder
- Locomotive Speed Control In Scale MPH Increments
- Proto-Scale 3-2 3-Rail/2-Rail Conversion Capable
- 1:48 Scale Proportions
- Proto-Sound 3.0 With The Digital Command System Featuring Freight Yard Proto-Effects
- Unit Measures: 18 1/2" x 2 5/8" x 4"
- Operates On 0-42 Curves

ATLAS O PREMIER S-2 LOCOMOTIVE GUARANTEED PRE-ORDERS IF PLACED BY WED. 6/8/2022

Product Info: <https://shop.atlasrr.com/d-674-spring-2022-o-scale-catalog.aspx>

Alco's early diesel switchers, in the 1930s, were characterized by a high engine hood that reached almost to the cab roof. This was necessitated by the height of the McIntosh & Seymour inline 6-cylinder diesels that powered the new engines. Each cylinder in the massive four-stroke motors displaced 1,595 cubic inches, compared with 567 cu.in. per cylinder in Electro-Motive's two-stroke diesels.

But in 1939, Electro-Motive introduced its SW1 switcher, with a lower hood and more cab windows that allowed it to brag about "full front vision." In response, Alco redesigned its engine mounts to allow the motor to drop into a recess in the frame, and in 1940 introduced its S-1 and S-2 switchers, with a greenhouse-like cab that offered ample visibility in all directions. The two models differed mainly in power output. The normally aspirated S-1 with 600 h.p. booted many a small steam switcher from railroad rosters coast to coast. Turbocharging gave the S-2 1000 h.p., allowing it to replace larger steam switchers and branch line engines like 2-6-0s, 2-8-0s and 2-8-2s. The S-series rode on Alco's own Blunt trucks, named for the in-house engineer who designed them to negotiate the tight turns and less-than-perfect track often found on switching assignments.

Introduced just in time for World War II's crush of traffic, the S-2 became a best-seller. Rare was the Class 1 railroad that did not own a fleet of them, and short lines coast-to-coast rostered them as well. By the end of production in 1950, more than 1500 S-2s had been delivered. The engines proved extremely durable, with many earning their keep into the 1970s and '80s, and a number still operating today in tourist railroad and short line service. Like most Alco engines with turbochargers, S-2s are known by railfans as "honorary steam locomotives," for the bursts of smoke they emit when their turbochargers rev up on acceleration.

The Atlas Operating Log Dump car continues in the long tradition of adding animation and action to model railroad operations for all ages. Based on the design of the prototypical DIFCO Operating Dump car, the Operating Log Car has a higher stake-body side – perfect for transporting and delivering larger construction loads such as pipes or logs (log load included). Cars of similar design have been used by many railroads in MOW service, as well as on shortlines and logging railroads.

Features:

- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Decorative Brake Wheels
- Fast-Angle Wheel Sets
- Requires 1 pc. of 6097 Accessory Rails track to operate this car
- Log load included
- Needle-Point Axles
- Die-Cast Metal Body
- Operating Dump w/Shake Action
- Unit Measures: 12 1/16 x 2 5/8 x 2 1/2
- Operates On 0-31 Curves

Western Pacific Log Dump Car shown with included log load.

Two road numbers per road name, except Santa Fe which has four.

The 40' Boxcar is widely known as one of the most popular freight cars used by railroads as they transitioned from steam to diesel. In particular the Pullman Standard or PS-1 design was one of the most popular and was widely used by North American railroads. Pullman had been making freight cars for more than half a century when it hit a home run with the PS-1. Introduced in 1947, it set the standard for postwar American freight cars. What made the PS-1 a landmark was its welded construction — an area in which Pullman led the industry. In addition to lighter weight, welding offered superior strength and better resistance to weather and corrosion than contemporary riveted cars. Like the EMD diesels that became ubiquitous on American railroads, the PS-1 was part of the postwar shift away from customized, railroad-specific locos and cars toward standardized designs produced in large quantities on efficient assembly lines. No wonder the PS-1 was soon followed by the highly successful PS-2 covered hopper, PS-3 open hopper, PS-4 flatcar, and PS-5 gondola.

Features:

- Intricately Detailed Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- Decorative Brake Wheels
- Separate Metal Handrails
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Sliding Car Doors
- 1:48 Scale Dimensions
- Unit Measures: 11 5/8" x 2 5/8" x 3 3/4"
- Operates On 0-31 Curves

First introduced in the late 60s, the ACF 2 Bay Centerflow was designed to carry heavy, dense materials such as sand, concrete and bentonite, unlike larger Centerflow hoppers which are used to transport lighter materials such as grain and plastics. The design proved to be very successful, with thousands being built and production lasting into the 1980s. Examples of the ACF 2 Bay Centerflow can still be found in service today.

Features:

- Intricately Detailed Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- Fast-Angle Wheel Sets
- Needle-Point Axles
- 1:48 Scale Dimensions
- Unit Measures: 20" x 2 3/8" x 4 3/8"
- Operates On 0-31 Curves

In 1966, Pullman Standard introduced an updated version of its' successful 4,427 cubic foot center discharge covered hopper. This "high side" hopper design moved the bottom of the sides upward for better access to the hopper discharge area and sloped the hoppers more sharply to facilitate faster and more complete unloading of less dense materials such as grain or ash while also including the larger long trough hatches which were highly suited to loading these commodities. These changes also made the cars lighter than their predecessors, and they were less expensive to make, which was important for what was at the time a very specialized freight car. Over 12,000 of the "high side" design car were built between 1966 and 1971, being both purchased outright by the railroads and private owners, or supplied by Pullman Standard as lease cars primarily in the grain, malt and lighter bulk chemical industries.

Features:

- Intricately Detailed, Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Fast-Angle Wheel Sets
- Needle-Point Axles
- (2) Operating Die-Cast Metal Couplers
- O Scale Kadee-Compatible Coupler Mounting Pads
- Detailed Brake Wheel
- 1:48 Scale Dimensions
- Unit Measures: 14" x 2 11/16" x 3 13/16"
- Operates On 0-31 Curves

Stub sill tank cars began entering service in the mid 1960s, replacing the aging full center sill tank car design. The stub sill design is easily recognizable as it has no solid underframe spanning the length of the car, instead the bolsters are attached directly to the tank. The stub sill design is often referred to as the "modern tank car design" because from the 1970s onward majority of general-purpose tank cars were constructed with stub sill design. Our model represents cars built from the mid 1960s and still in service today. A wide variety of products can be transported in this size and type of tank car. This includes asphalt, ethanol, fuel oil, metal sodium, molten phenol, paraffin wax, tallow, urethane polyol, and vegetable oil.

Features:

- Intricately Detailed Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Colorful, Attractive Paint Schemes
- Operating Die-Cast Metal Couplers
- Fast-Angle Wheel Sets
- Needle-Point Axles
- 1:48 Scale Dimensions
- Operates On O-31 Curves

In the 2000s intermodal containers came in a large variety of shapes and sizes. Common containers in that time ranged from 20', 28', 40', 45', 48' and 53'. This much variety was deemed inefficient by railroads and trucking companies alike in the early part of this decade. Today the most common containers are 20', 40' and 53'. With the phasing out of the once popular 48' containers, TTX had little need for their 48' well cars. These cars were still rather new, most built in the mid to late 1990s. So instead of scrapping cars that were in serviceable condition, TTX opted to start a rebuilding program in which the 48' well cars were shortened to 40' and/or lengthened to 53'.

Features:

- Die-cast body
- Low friction trucks with rotating bearing caps (2-Rail and 3-Rail)
- Detailed brake rigging
- Etched metal walkways
- Minimum radius:
3-Rail: 0-54
2-Rail: 36"

Atlas' model represents the Trinity 25,500 gallon, insulated, general-purpose design. This was introduced in 1986 and production continues today. There are at least 13,000 presently in service. Typical commodities include vegetable oil, tallow, styrene, benzene, asphalt, biodiesel, acrylates, and numerous other chemicals.

Features:

- Accurate painting and printing
- Numerous detail fittings and components specific to prototype
- Highly detailed body with prototypical jacket seams
- Metal end sills, lower side safety rails and safety rail support
- Length over couplers: 15.5"
- Minimum radius curve: 36" (2-Rail)
- Minimum diameter curve: 0-54 (3-Rail)

Based upon cars built by the General American Car Company for the Cudahy Packing Co. in 1925, the 36' wood reefer is representative of the thousands of cars that transported meat, dairy, beer and food products well into the 1960's.

Features:

- Accurate painting and lettering
- Highly detailed ABS body
- Separately-applied grab irons, ladders and stirrups
- Hatch styles and truss rods appropriate per road name
- Separately-applied door hardware
- Opening hatches and doors
- Die-cast chassis
- Detailed braking system
- 40-ton Bettendorf-style die-cast sprung trucks
- Die-cast articulated couplers (3-rail)
- Die-cast scale couplers with internally sprung knuckles (2-rail)
- 33" scale metal wheels (2-rail)
- Minimum diameter curve (3-rail): 0-31
- Minimum radius curve (2-rail): 24"

A perfect fit for all Atlas O well cars. This Atlas O 40-foot high-cube container model represents the most common type of international shipping container in use today. Specifically, this model represents a (ISO Type Code 45G1) 40-foot high-cube container found in almost all of today's shipping and leasing fleets. Made from durable corrosion resistant Corten Steel and a strong corrugated design these containers can last up to 20 years in international service. The Type 45G1 became more prevalent in the 2000's and surpassed 40-foot standard height containers in popularity in the 2010's.

*ISO is the International Organization for Standardization.

Features:

- Compatible with all Atlas O well cars and existing 40' container models.
- Detailed door rods, landing pads and corner post
- ISO Type 45G1

**PERFECT FOR USE WITH
ATLAS WELL CARS
INCLUDING THOSE ON
PAGES 22-25!**

ONE

Since the 1970s most international freight has been shipped by standardized 20- and 40-foot containers. Some of this huge flow of cargo between countries needs to be refrigerated for the transit. The second most common type of ISO* container in use is the refrigerated container. Today's refrigerated container design uses high tech composite (plastics and metals) construction and a "picture frame" type refrigeration unit. This Atlas model represents a standard 20-foot refrigerated container (ISO Type Code 22R1) found in many shipping and leasing fleets.

*ISO is the International Organization for Standardization.

Features:

- Composite materials sandwich-sides design
- Detailed picture window refrigeration unit with separate parts
- ISO Type 22R1

ATLAS O SCALE TRACK & ACCESSORIES
AVAILABLE FROM YOUR LOCAL HOBBY SHOP OR SHOP.ATLASRR.COM

Product Info: <https://shop.atlasrr.com/default.aspx>

Atlas is proud to offer a wide variety of track in both 2- and 3-Rail. Our track is time-tested and modeler approved and is crafted to be the MVP of your layout.

Modeled for Realism: The scale-sized plastic ties have a realistic wood grain, the tie plates have spikes, the rail joiners have authentic bolt detail and the center rail is blackened.

Versatility: Every track piece has been specially engineered to fit precisely together in an infinite variety of combinations without the need for custom cutting and fitting.

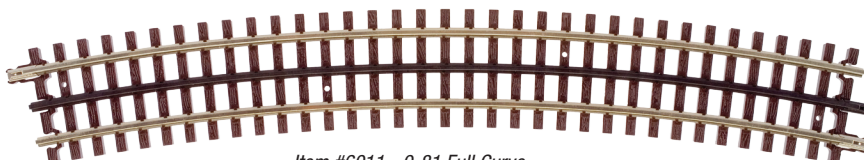

Performance: We chose a SOLID nickel silver T-rail for extra stability and superior electrical conductivity. In addition, the wide, flat surface of the rails provides far greater wheel/rail contact and better traction than tubular track. What's more, solid rails absorb sound better than tubular track so you can enjoy the sounds of your locomotive.

3-RAIL FEATURES:

- SOLID nickel silver rail for realistic shape, sounds and rust prevention
- Super joiners for tight fit and superior electrical connection
- Large and growing list of track: 10 different diameters (O-27- O-108), 16 different switches, 6 crossings, all the straight pieces you could ever want, flex track and more!
- Geometrically exact layout construction
- UV compatible: great for both indoor and outdoor use

Item #6094 - Track Screws

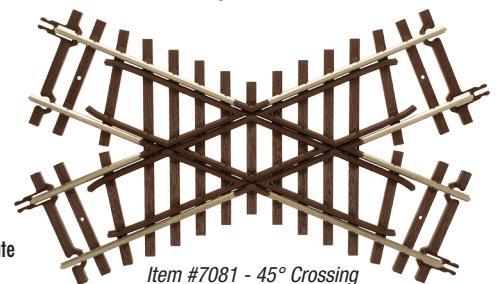

Item #6011 - 0-81 Full Curve

2-RAIL FEATURES:

- Code 148 Solid Nickel Silver Rail
- American prototype ties and tie spacing with correct spike, and tie plate and bolt details
- Dark brown tie strip
- Turnouts feature highly detailed metal insulated frogs and points
- Metal frog can be powered if desired
- UV compatible: great for both indoor and outdoor use
