PRE-ORDER ANNOUNCEMENTS - SPRING 2026

PRE-ORDER DUE DATE: WEDNESDAY APRIL 15TH 2026

March 2026

Dear Model Railroader,

Welcome to the Atlas Model Spring 2026 Catalog. We're proud to bring you all new announcements from our Master and Trainman lines. We hope that whether you are a dedicated Atlas follower or a new fan, that you continue to make us a part of the tradition of fantastic model railroading!

This catalog is part of the Atlas All Scales Series Catalogs—a lineup of dedicated catalogs across our product families, updated on a regular basis. Each edition supports the Atlas Pre-Order system. Before the Research & Development team gives the final go-ahead for production, Atlas announces upcoming products so customers can place advance pre-orders through their preferred Atlas Authorized Dealer.

This edition of our catalog includes announcements of prototypical N and HO locomotives including RS-1 and GP40 Locomotives. We're also announcing plenty of prototype accurate rolling stock including N & HO scale F89J Flat Cars, Coalveyor Gondolas, several styles of Hoppers, the brand new HO Trinity Hourglass Autorack and more.

While on the Atlas website, shop.atlasrr.com, be sure to peruse the "New Arrivals" pages to see what has recently arrived on Authorized Dealer shelves, or the In-Stock pages to see what is readily available from Atlas. Need to do some track work? Atlas has all the pieces you need - from straights to switches and everything in between! Atlas can also help outfit you with a full layout package - check out shop.atlasrr.com for more information. We also offer a full line of instructional guides if you're looking to start fresh with a brand new layout! For a complete listing of our books, visit our website or inquire at your local hobby shop. For assistance finding an Atlas Authorized Dealer near you, use our handy Dealer locator at: <https://shop.atlasrr.com/storelocator.aspx>.

Don't miss out on all of the latest Atlas news, announcements, special offers and more. You can ensure that you receive the latest Atlas news delivered to your inbox by visiting shop.atlasrr.com and signing up for our email newsletter - the Atlas Insider .

Thank you for your interest and enthusiasm in the exceptional multi-scale product offerings produced by Atlas Model Railroad Company.

Happy Modeling,
Ross Medine
Sales Manager

Atlas Catalog Pricing Notice - Prices shown in this catalog reflect prevailing sourcing, production, and market cost conditions at the time pricing was established. Final pricing may be adjusted upward or downward based on changes in cost structures, regulatory requirements, supply chain conditions, or other market factors. Atlas continuously monitors evolving conditions across the production and distribution cycle and works to manage cost volatility in support of long-term customer relationships.

To Order, Please Contact Your Authorized Atlas Dealer

All prices are in US dollars. Prices and dates are subject to change without notice. Atlas reserves the right to correct errors, change prices and modify designs without notice.

Any product pricing errors and updates may be corrected at any time through notification of distributors, dealers and consumers on our website: shop.atlasrr.com.

TOTAL PIECES ORDERED					

The RS-1 was introduced by ALCO in March of 1941 with the delivery of the first of two units to the Rock Island. Combining the accessibility of a switching locomotive and the higher-speed tracking of a road unit, the RS-1 started a revolution in locomotive design that was soon embraced by all of the major diesel-electric builders. Despite ALCO's own introduction of higher horsepower roadswitchers, the 1,000 h.p. RS-1 had a production span of 19 years (1941-1960) with 623 units.

Features:

- Powered low friction drive
- Blackened metal wheels, dual brass flywheels
- Directional lighting
- Golden-White LEDs
- AccuMate® knuckle couplers

Silver Sound Ready™

****Silver Sound Ready™**

Atlas Silver Sound Ready models are equipped with a speaker for easy conversion to sound with the addition of a decoder.

In 1966 EMD introduced a new line of locomotives based on the 16-cylinder 645-series prime mover. The "40-series" included a six-axle and four-axle model, the latter being the GP40. A total of 1,145 units were produced between 1966 and 1972. These turbocharged 3,000hp locomotives were used primarily in road freight service. The GP40 was a versatile locomotive that could be found across the US hauling drag freights over mountain passes and leading high-speed intermodal trains across flat terrain. Three rooftop radiator fans at the rear of the long hood differentiate a GP40 from its lower horsepower counterpart, the GP38, which has two fans at this location.

Features:

- Directional lighting
- Walkway safety tread
- Blackened metal wheels
- Factory-equipped with AccuMate® knuckle couplers
- Dynamic brakes (as appropriate by railroad)
- Golden-white LEDs

ATLAS MASTER® N EMD SW9/1200 LOCOMOTIVE

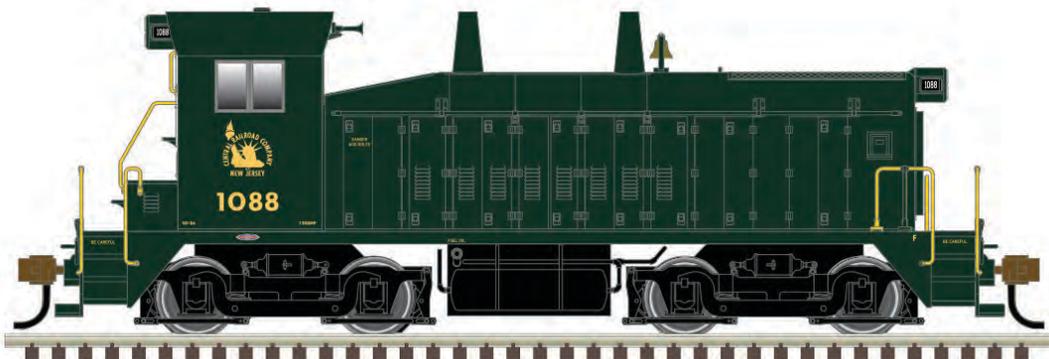

View this model in our online store: <https://shop.atlasrr.com/d-751-2026-winter-n-scale-pre-orders.aspx>

The EMD SW9 is a classic North American diesel-electric switcher locomotive that became one of Electro-Motive Division's (EMD) most successful yard power designs of the early post-war era. Built between November 1950 and December 1953 by General Motors Electro-Motive Division in the United States, with additional units constructed by General Motors Diesel (GMD) in Ontario, Canada, the SW9 was designed primarily for yard switching, industrial service, and light transfer work.

Powered by an EMD 12-567B 12-cylinder two-stroke diesel engine producing 1,200 hp, the SW9 delivered dependable performance with robust low-speed tractive effort suited to frequent starts and stops typical of switching duty. Unlike its predecessor, the SW7, the SW9 lacked the upper hood vents and generally featured improved internal components, and late in production some units received a 567BC variant of the prime mover (with one final unit even equipped with a full 567C).

During its relatively short production run, about 786 units were built for American railroads and 29 for Canadian operators, making it one of the more widely seen medium-power switchers of the era. The locomotive rode on B-B (four-axle) trucks and was adaptable enough that some railroads acquired paired "cow-calf" sets (TR5) where two units were semi-permanently coupled for heavier switching tasks.

Railroads appreciated the SW9 for its versatility, reliability, and ease of maintenance, traits that kept many in service for decades; numerous examples continued to work on short lines, industrial properties, and even on excursion or heritage assignments long after their Class I careers ended.

Key characteristics of the EMD SW9 include:

- Power output: ~1,200 hp from an EMD 12-567B prime mover (some later units had 567BC/C)
- Builder: EMD (USA) and GMD (Canada)
- Production years: November 1950 - December 1953
- Total built: ~815 units (U.S. + Canada)
- Wheel arrangement: B-B (four axles)

Overall, the SW9 represents an important step in post-war dieselization, bridging earlier medium-power switchers and later models like the SW1200, which adopted more refined engines and extended production well into the 1960s.

This all new model from Atlas is loaded with great features:

- Golden-white LEDs
- Directional lighting
- Separately-applied painted handrails (where appropriate)
- Blackened metal wheels
- Scale Speed™ motor
- Factory-installed 1015 style magnetic knuckle couplers
- Accurate painting and printing

NEW ROAD NUMBERS

TTX 1970s

Built for Trailer Train by ACF between 1966-68, the visually unique "F89-J" 89' Flat Cars were produced for TOFC service and was the only standard-height, bowl deck car of this design by ACF. Easily identified as a common asset in the vast TTX car fleet, over 1,600 F89-J's haul trailers, pipe, rail, bulk loads, and hundreds remain in service today! Not easily confused with any other 89' flat car, these models will add flair to your freight roster!

Features:

- Ready-to-run
- Die-cast metal frame
- Fine-scale detail
- Accurately painted/printed (multiple variations!)
- Collapsed & raised hitch detail
- Prototypical ride height
- 70-Ton BLMA trucks
- Fine-scale BLMA metal wheels

Built in the 1980s by ACF®, the Coalveyor Bathtub Gondola operated in unit train service to deliver coal to power plants. These cars were most often lettered for the utility companies that leased and purchased them. Many are still in service today.

C&D cars were usually run in blocks of 4-12 cars. They were used for construction and demolition debris/refuse hauling.

Features:

- Die-cast chassis
- Ready-to-run
- Interior bracing
- Removable coal load
- AccuMate® couplers
- Brake detail
- 100-ton roller-bearing trucks
- Accurate painting and printing

In the 1970's, Greenville began to build a fleet of venerable open top hoppers. These would be known as the Greenville 100-ton 2-Bay Hopper. They could be seen in any type of service, hauling rock, ballast, dirt, sand, and even taconite ore. Their smaller size and 2-bay hopper doors made them very versatile for any service in any condition. Atlas' offering of the Greenville Hopper features crisp lettering, durable body, fine end ladder and end details, and free rolling trucks. A group of cars would look right at home in a unit train arriving from the quarry or buried in your consist delivering a shipment of clean dirt to a construction site.

Features:

- Crisp painting and printing
- Durable body
- Fine end ladder and end details
- Free rolling trucks

TOTAL PIECES ORDERED					

The Russell Snow Plow is a critical piece of MOW equipment for Northern railroads that have to deal with harsh winter storms. It is most often used for clearing large snow drifts and snow embankments along the railroad right of way.

In the summer months Russell Snow Plows can typically be spotted in yards and service facilities alongside other MOW equipment.

The Russell Snow Plows have been a mainstay of Northern railroading since the 1920s and they don't appear to be going anywhere soon.

Features:

- Weighted, Detailed Underframe
- Crisply Molded Body Detail
- Knuckle Couplers
- Window Glazing
- Cupola Mounted Grab Irons
- Brakewheel
- Roof Mounted Horn (where appropriate)
- Builders Plate Detail

The caboose has long been a staple of American railroading. Typically positioned at the rear of the train, the caboose acted as a place for the conductor and rear brakeman to monitor the train as well as bunking at the ends of long runs. Many crews would decorate the insides of their assigned caboose for a personalized atmosphere. While the most common design was the "cupola" caboose, which had a windowed extension projected above the roof of the car, it also was not immune from clearance issues. For railroads that desired a caboose that could clear low heights, tunnels, and any other obstructions, they turned to a new design called the "bay window" caboose. The carbodies were virtually similar except for a bay windowed protrusion on the sides of the car. The International Steel Bay Window caboose is based off of a popular design and features multiple bay variations, which includes a solid window, double window, and a shortened bay. This popular caboose will fit right in, acting as crew quarters for long distance runs, a place for the conductor to safely stand while your local makes a reverse shove, or even a part of excursion service.

Features:

- Crisp painting and lettering
- 3 Different Bay Window Styles per prototype
- Free Rolling Trucks
- Ready-to-run
- Magnetic Knuckle Couplers

The 90 to 100 ton rib-sided steel hopper was the mainstay of coal hauling railroads since the 1960s. Replacing the venerable 2-bay, 55-ton USRA open hoppers, these 3-bay cars have been produced by nearly every major car manufacturer including Bethlehem and Pullman, and have served long lifetimes due to their optimal capacities, sturdy construction and practical design. These designs enabled cars to haul not just coal, but crushed stone, gravel, dirt, rock and other commodities not affected by exposure to the elements. Many cars originally fitted with friction bearing trucks were later outfitted with 100-ton roller bearing trucks, enabling modest increases in tonnage before the advent of lighter, aluminum-bodied cars and purpose-built unit train cars (such as rotary dump gondolas) became the norm. Steel rib-sided hoppers continued to serve, however through the mid 2010s on many roads in both coal and MOW service.

Features:

- Accurate paint schemes
- Free-rolling trucks (friction or roller bearing, as per prototype)
- Accurate knuckle couplers

In 1974, ACF® built the first box car for Railbox, a subsidiary of the Trailer Train Company. They went on to produce 5,400 50' cars over the next six years, receiving large orders from Class I railroads, shortlines and box car leasing companies. These box cars have a 50' 6" interior length designed to fit slightly larger Plate C dimensions. This yielded a capacity of nearly 5,300 cubic feet. Most of the cars were built with non-cushioned underframes.

Features:

- Prototypical non-terminating corrugated ends
- Diagonal paneled roof
- Single 10-foot YSD design sliding door (non-operating)
- Detailed cross-member attachment rivets on the side sills
- Weighted, detailed underframes
- True scale dimensions with accurate details
- Equipped with AccuMate® knuckle couplers

The 1997 model year marked a bold redesign for the legendary Ford F-150, introducing a smoother, more aerodynamic body style while staying true to its tough, hardworking heritage. This prototype-inspired miniature captures the truck's distinctive rounded front fascia, signature grille, and muscular stance that made it a standout in the late '90s pickup market. From its detailed headlights and sculpted hood to the carefully replicated bed and wheels, this scale model reflects the innovation and durability that defined the original. A must-have for collectors and truck enthusiasts alike, this model celebrates the dependable power and all-American character that made the 1997 F-150 an instant classic.

Features:

- Silver painted bumpers
- Plastic head and brake lamp covers
- Two cars per pack

A Detailed Look Behind

Atlas Classic® N/Master® HO RS-1 Locomotive - Maryland & Delaware #20, 22

Atlas model rendering

Maryland & Delaware Alco RS-1 #20 and #22

The history of the Maryland & Delaware Railroad (MDDE) locomotives No. 20 and No. 22 is a classic tale of Alco longevity, with both units following remarkably similar paths from the Northeast to the South before settling into their famous roles on the Delmarva Peninsula.

Locomotive No. 20 began its life in October 1951 as Rutland Railroad #400. After the Rutland's decline, it moved to the Tennessee Railroad as #4 in 1956, eventually being absorbed into the Southern Railway system in 1973. Before joining the Maryland & Delaware, it served an industrial stint with the South Carolina Public Service Authority (Santee Cooper). On the MDDE, No. 20 became a staple of the line's roster throughout the late 70s and early 80s. Its journey continued westward when it was sold to the Arkansas & Missouri Railroad (A&M), where it was christened the "Bruce Klink." Today, it remains on the A&M property in a stored status.

Locomotive No. 22 has an even longer pedigree, built earlier in April 1943 for the Atlanta & St. Andrews Bay Railway (The Bay Line) as #905. Like No. 20, it eventually found its way to the Tennessee Railroad (as #1) and briefly into the Southern Railway fleet following their 1973 merger. After also serving the South Carolina Public Service Authority, it arrived at the Maryland & Delaware in the late 1970s. It is perhaps best remembered by fans for its 1979 overhaul and vibrant red and yellow paint scheme. After its tenure on the MDDE, it joined the Arkansas & Missouri as No. 22, the "J.A. Hannold," where it became a favorite for excursion service. In 2002, it was donated to the National Museum of Transportation in St. Louis, where it is preserved as a testament to the enduring design of the Alco RS-1.

Atlas Master® N/HO Coalveyor Gondola - David J. Joseph Company (DJJX)

Prototype photo

David J. Joseph Company (DJJX) manages one of the largest independently owned private railcar fleets in North America, supporting both internal logistics for their parent company Nucor and external leasing customers. This fleet includes a broad range of freight railcars, especially open-top gondolas. Which are well-suited for hauling bulk commodities like scrap, aggregates, ores, and other industrial products.

This particular Atlas DJJX paint scheme offering came from UFIX (Utility Fuels, also known as Houston light & Power) before being bought and patched by DJJX Company. These cars have stood the test of time, being abused and worked hard, loaded with coal, scrap, or debris. Even though they are starting to show their age, these cars are still kicking on North American railroads, and DJJX's fleet is no exception.

A Detailed Look Behind

Atlas Master® N 100 Ton Greenville Hopper - Wheeling & Lake Erie 230024 "On Track for The Cure"

100 Ton Greenville Hopper - Wheeling & Lake Erie #230024 "On Track for The Cure"

In April of 2025, the Wheeling and Lake Erie railroad was performing routine shopping of 15 of their Greenville 2-bay 100-ton stone hoppers. As the work was ongoing, a crew member had the idea to spread the word about Breast Cancer Awareness by painting the last of the cars in the rotation in bright pink. The entire shop crew signed on to the idea, from the design of the art, fabricating and affixing new steel plates for the prominent "On Track for the Cure" slogan, and painting and stenciling messages of hope and support for something much greater than just a routine job on a workhorse car. Now a part of Transtar along with a number of former true-grit US Steel railroads, the Wheeling and Lake Erie car shops enduring message of teamwork coupled with pride, purpose and determination carries far more weight in life than the stenciled capacity in stone or car milage traveled. It is hope for the future.

For a brief video on the project, see: <https://www.facebook.com/watch/?v=1023347079893189>

Atlas Master® N Bay Window Caboose - Conrail #21303

Bay Window Caboose - Conrail #21303

After Conrail was divided in 1999 between CSX and Norfolk Southern, Conrail Bay Window Caboose #21303 became property of Norfolk Southern and was repainted red with Conrail Shared Assets markings. This was because Conrail Shared Assets Areas remained jointly operated even after the formal split of Conrail (Conrail crews and trackage, using shared CSX and Norfolk Southern Equipment). Conrail #21303 continued to be used in local service, particularly around the Dover, NJ area and other neighboring New Jersey Shared Assets operations, often seen at the end of local freight and yard assignments well into the 2010s.

The RS-1 was introduced by ALCO in March of 1941 with the delivery of the first of two units to the Rock Island. Combining the accessibility of a switching locomotive and the higher-speed tracking of a road unit, the RS-1 started a revolution in locomotive design that was soon embraced by all of the major diesel-electric builders. Despite ALCO's own introduction of higher horsepower roadswitchers, the 1,000 h.p. RS-1 had a production span of 19 years (1941-1960) with 623 units.

Features:

- Die-cast metal chassis and fine scale handrails
- Golden White LEDs
- DCC/Sound version available with LokSound decoder
- Separately-applied wire grab irons, coupler cut bars, trainline hoses and lift rings
- Accurate painting and printing
- Metal couplers
- Realistic die-cast mainframe
- Five-pole skewed armature motor with dual-flywheels for optimum performance at all speeds
- Directional lighting

Silver Sound Ready™

Wired speaker and enclosure included for easy conversion to sound.

In 1966 EMD introduced a new line of locomotives based on the 16-cylinder 645-series prime mover. The "40-series" included a six-axle and four-axle model, the latter being the GP40. A total of 1,145 units were produced between 1966 and 1972. These turbocharged 3,000hp locomotives were used primarily in road freight service. The GP40 was a versatile locomotive that could be found across the US hauling drag freights over mountain passes and leading high-speed intermodal trains across flat terrain. Three rooftop radiator fans at the rear of the long hood differentiate a GP40 from its lower horsepower counterpart, the GP38, which has two fans at this location.

Features:

- Golden-white LEDs
- Realistic die-cast underframe
- Five-pole skewed armature motor with dual flywheels for optimum performance at all speeds
- Directional lighting
- Metal couplers
- Detailed cab interior with crew
- Separately-installed scale windshield wipers, metal grab irons and fine scale handrails
- Movable drop steps, Walkway safety tread, Coupler cut bars, Snowplow
- Multiple unit hoses and trainline hoses

Silver Sound Ready™

Wired speaker and enclosure included for easy conversion to sound.

Between 1931 and 1940 ALCO built 177 high hood (HH) switching locomotives of various horsepower ratings and body styles. The "HH" models were forerunners to the popular S-series of switchers which featured lower hoods. ALCO's high hood switchers were in production long before similar models from competitors EMC/EMD (1935) and Baldwin (1937). Interestingly, the "HH" model designation is a term coined by rail historians to describe what ALCO documentation had simply referred to as 600-hp or 660-hp switchers. In later years ALCO had referred to these early units as "high hood switchers" so this designation is appropriate.

Of the 177 high hood switchers built, 104 were HH600s, 18 were HH660s, 21 were HH900s and 34 were HH1000s. Some of the largest users of these models included New Haven, Lackawanna and New York Central. Various physical changes occurred during the 9 years these locomotives were in production. The biggest change occurred in 1934 when ALCO hired industrial designer Otto Kuhler to improve the appearance of their very boxy, utilitarian switchers. The post-1937 production units we are now offering featured many of his suggested improvements.

In 1938 ALCO introduced a line of high hood switchers powered by the new model 538 diesel engine which featured a cast iron engine block. This engine was offered in both a 660-hp (non-turbocharged 538) and 1000-hp (turbocharged 538-T) switcher, each weighing approximately 196,000 pounds. The horsepower rating could be adjusted downward slightly per customer specification by lowering the RPM of the diesel engine. Therefore, 600-hp and 900-hp models were offered concurrently. The HH600 and HH660 locomotive models we are offering were produced from 1938 to 1940 and were externally identical.

**CSX Licensed Product*

Features:

- All new tooling
- Early Blunt truck with separate brake cylinders, molded coil spring detail (optional) and metal truck chains
- Separately-applied metal grab irons and lift rings, fine scale handrails and stanchions, coupler cut lever and piping
- Directional lighting with golden-white LEDs
- Five-pole skewed armature motor w/ dual flywheels for optimum performance at all speeds
- NMRA 8-pin plug for DCC
- Metal Couplers

First built in 2019, the TrinityRail® Hourglass™ Autorack stands out for its wider interior and its unique hourglass shape, which improves ergonomics and makes loading and unloading easier and safer for workers and reduces potential damage to the vehicles inside. This is ideal for transporting larger pickup trucks and SUVs. Atlas is proud to offer a HO scale model of this prototype for the first time, with multiple roadname-specific variations to choose from. The model design was made in cooperation with TrinityRail® from official blueprints.

Features:

- Designed in the USA
- All new flat car and superstructure Tooling
- Accurate Wabtec Barber Style Trucks
- Four body style variations to match different prototype configurations
- Highly detailed etched metal side screens to maximize prototypical appearance
- Metal couplers
- Accurate painting and lettering
- Many separately applied parts
- 22" inch minimum radius, 24" inch radius or larger recommended

NEW ROAD NUMBERS

TTX 1970s

Built for Trailer Train by ACF between 1966-68, the visually unique "F89-J" 89' Flat Cars were produced for TOFC service and was the only standard-height, bowl deck car of this design by ACF. Easily identified as a common asset in the vast TTX car fleet, over 1,600 F89-J's haul trailers, pipe, rail, bulk loads, and hundreds remain in service today! Not easily confused with any other 89' flat car, these models will add flair to your freight roster!

Features:

- Ready-to-run
- Die-cast metal frame
- Fine-scale detail
- Accurately painted/printed (multiple variations!)
- Collapsed & raised hitch detail
- Prototypical ride height
- Era-specific cut levers
- 70-Ton trucks
- Fine-scale metal wheels
- Body-mounted Kadee #58 couplers

Built in the 1980s by ACF®, the Coalveyor Bathtub Gondola operated in unit train service to deliver coal to power plants. These cars were most often lettered for the utility companies that leased and purchased them. Many are still in service today. C&D cars were usually run in blocks of 4-12 cars. They were used for construction and demolition debris/refuse hauling.

Features:

- Die-cast chassis
- Ready-to-run
- Interior bracing
- Removable coal load
- AccuMate® couplers
- Brake detail
- 100-ton roller-bearing trucks
- Fine scale wheels
- Accurate painting and printing

Introduced in 1961 by ACF® to haul sand, clay, salt, grain and bulk plastics, the Cylindrical Hopper was the first commercially successful tank-type covered hopper car design. A few of the more than 4,000 cars of this type built through 1966 can still be seen in service today across the United States.

Features:

- See-through roof walks
- Blackened metal wheels
- Free-rolling 100-ton trucks
- Detailed brake gear
- AccuMate® couplers
- Fine painting and printing

Covered hoppers are a relatively new car family. The AAR considered these "special" cars until the 1980's when they finally got their own car type code category. These early covered hopper designs were built primarily for more efficient cement loading and unloading (previously cement was bagged and placed in box cars). This two-bay covered hopper car design was built by Pullman-Standard starting in the late 1940s with production continuing into the 1950s. This car features eight round roof hatches for quick loading. Two large gravity gates were used to discharge the commodity as quickly as possible. Capacity is rated at 2,003 cubic foot.

Features:

- 50-ton friction bearing or 70-ton roller bearing trucks (as appropriate by road name)
- Detailed brake gear
- Accumate® couplers
- Prototypical painting and printing

The first all-steel cabooses built for the Chesapeake & Ohio Railroad were produced in 1937 by the Magor Car Corporation in Clifton, N.J. Magor, along with St. Louis Car Company and ACF, ultimately built a total of 350 cabooses for the C&O using a similar design. The last were produced in 1949. Through subsequent rebuilding and modernization, many remained in service through the end of regular caboose usage in the 1980s. Cabooses of a similar design were also built for Pere Marquette, Missouri Pacific and Chicago & Eastern Illinois.

Features:

- True scale dimensions with accurate details
- Weighted, detailed underframes
- Equipped with AccuMate® Knuckle Couplers
- Trucks equipped with free-rolling metal wheels
- Clear window inserts & separately applied side railings

In 1974, ACF® built the first box car for Railbox, a subsidiary of the Trailer Train Company. They went on to produce 5,400 50' cars over the next six years, receiving large orders from Class I railroads, shortlines and box car leasing companies. These box cars have a 50' 6" interior length designed to fit slightly larger Plate C dimensions. This yielded a capacity of nearly 5,300 cubic feet. Most of the cars were built with non-cushioned underframes.

Features:

- Prototypical non-terminating corrugated ends
- Diagonal paneled roof
- Single 10-foot YSD design sliding door (non-operating)
- Detailed cross-member attachment rivets on the side sills
- Weighted, detailed underframes
- True scale dimensions with accurate details
- Equipped with AccuMate® knuckle couplers

In 2007, Ford released the third generation of the then 10-year-old Expedition, a truck-based "station wagon" - now commonly called an SUV - which had been developed to replace the off-road 2-door Bronco. Using the successful F-150 platform with some suspension changes, Ford created a reliable and versatile platform to satisfy the growing demand for "family haulers" as well as carving out a prominent position in public safety roles. The Expedition is considered to be one of the most durable SUVs, with more than 5% still on the road after 200,000 miles! The introduction of a new ladder-frame design with a slightly more rigid chassis and improved suspension in the 2007 Expedition provided buyers with more off-road "sport" capability. Together with the new EL extended wheelbase, the third-generation upgrades also made the Expedition a great platform for public service, and "Special Service Vehicle" configurations became very popular with police, fire, and medical services. The Atlas model of this popular SUV faithfully reproduces the styling and features of the Expedition EL, with 17" and 20" wheel variations, public safety features as appropriate (such as over-riders, light bars, spotlights, etc.) and prototypical paint and configurations for emergency services or just driving around town.

Features:

- Separately applied details
- Appropriate 5 or 6 spoke wheels as appropriate
- Interior and underbody detail
- Rubber tires

Put Your Trains on the Right Track!

With time tested, modeler approved Atlas HO & N scale track!

Whether you're finishing an existing layout, starting a new one, or just giving that trainset loop some extra pieces, Atlas has the 'right track' for you. The rugged plastic construction, nickel silver rail and U.S. prototype detail, assures longevity, maximum conductivity and accurate realism that guarantees your trains look good and keep running smoothly. Atlas track provides industry leading **quality** at unequalled **value**, and our **selection** is so large we have an entire catalog devoted to it. HO and N scale track, in a variety of rail sizes, is fully stocked and ready to ship to you and your favorite Atlas authorized dealer now. For more information, and the dealer nearest you, visit shop.atlasrr.com and request a catalog of your own. And remember... *You're on the right track...with Atlas!*

HO SCALE TRACK

HO True-Track®

Atlas HO True-Track® has true-to-life gray gravel bed, correctly angled roadbed shoulders and features Atlas Code 83 Snap-Track®.

HO Code 83

Atlas HO Code 83 track features prototypically-fine brown ties and nickel silver rail, and not only looks realistic but is incredibly reliable.

HO Code 100

Atlas HO Code 100 track features black injection molded plastic ties and solid nickel silver rail, and is suitable for all skill levels.

N SCALE TRACK

N True-Track®

Atlas N True-Track® features Code 65 rail & dark brown ties with prototypical spacing and is now improved with true-to-life gray gravel bed making it even more realistic!

N Code 55

Atlas N Code 55 track features simulated wood brown ties and smaller nickel silver rail, and is praised for its superior design and ease of use.

N Code 80

Atlas N Code 80 track features black ties and nickel silver rail, and is built to last for ultimate performance.

ATLAS SUPER-FLEX® TRACK

- Item #168 HO Code 100 Super Flex Track
- Item #500 HO Code 83 Super Flex Track
- Item #2000 N Code 55 Super Flex Track
- Item #2500 N Code 80 Super Flex Track

Invented and patented by Atlas founder Stephen J. Schaffan Jr., this innovative, finely engineered precision track is the first choice of experts who demand the best. Easy to install, Super-Flex Track® enhances the realism of your layout. Unlike other flexible track which can become inflexible and kink, Atlas' Super-Flex Track® can be formed and re-formed with ease to achieve the desired shape. This unique track can be shaped to form curves of any radius, is ideal for spiral easement curves and is easily manipulated to help you make your layout vision a reality.

**ATLAS
SUPER-FLEX® TRACK**
the original and still the best.
