PREMIER CATALOG

PRE-ORDER DUE DATE: WEDNESDAY JULY 28TH 2021

June 24, 2021

Dear O Scale Model Railroader,

Welcome to the June 2021, Atlas O "Premier Catalog". Since the Atlas acquisition of the majority of MTH's Premier line of locomotives and rolling stock molds, the team at Atlas has been working tirelessly to bring you this noteworthy catalog brimming with an abundance of new releases that will look terrific operating on your O scale layout.

Atlas is proud to announce the commencement of our Premier locomotive line with the offering of the first two "Premier" locomotives, the GE 44 Ton Switcher, and the EMD SD40-2, both with MTH DCS equipped, Proto-Sound 3.0!

Five "Premier" rolling stock will be making their debut in this month's Catalog, including: the 40' PS-1 Boxcar, 2 Bay Offset Hopper, 50' Gunderson High Cube Box Car, 50' Airslide Hopper, and the 8K Gallon ("Beer Can) Tank Car with authentic brewing company paint schemes. A notable announcement is the ALL-NEW Gunderson Multi-Max Autorack. The initial production run will include five popular road names and will be available in both 3-Rail and 2-Rail versions, opening doors, and available slide-in racks. In addition, three new structure kits are also being introduced. These detailed, fun to assemble building kits will make impressive additions to your O Scale towns.

Please note there are both "Guaranteed Pre-Order" and "Limited Availability" products offered in this Premier Catalog. Guaranteed Pre-Orders will be filled if Atlas receives the order by the July 28th due date. Limited Availability products are those that Atlas has speculated on an order quantity and therefore cannot be guaranteed. Either way, it's best to place an order as soon as possible for your best chances at acquiring a selected product.

To remain updated on all Atlas O products and special announcements, sign up for the Atlas Insider Email at <https://shop.atlasrr.com>.

Happy O Scale Railroading,
Drew Postle, Atlas Sales Manager

The 44-tonner was a workaround. In 1937, seeing that new diesels were putting the fireman's role in jeopardy, the railroad unions negotiated the "90,000 Pound Rule" with the railroads - specifying that any engine with a weight on drivers of 90,000 pounds or more would require a two-man crew. General Electric's 44-tonner, introduced in 1940, skirted the 90,000 pound rule and was thus the largest locomotive that could legally be operated by one person on a common carrier railroad.

But while the 44-tonner put the fireman out of work, it made the engineer's life easier than it had been on the 0-4-0 or 0-6-0 steamer it replaced. The greenhouse-like cab in the center of the engine offered 360-degree visibility, a decided advantage in the chaos of the switch yards, industrial areas and railroad backshops where the 44-tonners usually labored. In the event of a collision, the engineer had the protection of a hood at each end of his locomotive, unlike an end-cab switcher.

Under each of those hoods throbbed a dependable 180-hp Caterpillar V-8 diesel - so dependable that many of these engines are still hauling freight or tourists today, more than seven decades after they were built. Predicting modern diesels, where the lone engineer shares his cab with a train crew that no longer has a caboose, the 44-tonner's cab also sported a second seat for a brakeman or conductor.

Unlike most of its competitors in the small engine business, who saw their main clients as industrial plants and short lines, General Electric pursued sales with Class 1 railroads. At least 26 of them rostered 44-tonners, with the Pennsy having the largest fleet at 45 engines. The 44-tonner was also beloved by industrial roads and short lines, where it often served as mainline power on lines with prosaic names like Arcade & Attica or Dansville & Mount Morris. The engine was also popular with the U.S. military for use domestically and abroad. By the time the last of the 44-tonners were outshopped in 1956, about 386 engines were working in locales as diverse as Cuba, India and Saudi Arabia.

Features:

- Intricately Detailed, Die-Cast Metal Body
- Die-Cast Truck Sides, Pilots and Fuel Tank
- Metal Chassis
- Metal Handrails and Horn
- Handpainted Engineer Cab Figure
- Authentic Paint Schemes
- Metal Wheels, Axles and Gears
- Kadee-Compatible Coupler Mounting Pads
- (2) Remote-Controlled Proto-Couplers
- Prototypical Rule 17 Lighting
- Directionally Controlled Constant Voltage LED Headlights
- Lighted LED Cab Interiors
- (2) Precision Flywheel-Equipped Motors
- Onboard DCC/DCS Decoder
- Locomotive Speed Control In Scale MPH Increments
- 1:48 Scale Proportions
- *Proto-Sound 3.0 With The Digital Command System Featuring Freight Yard Proto-Effects*
- Unit Measures: 8 1/2" x 2 7/16" x 3 1/4"
- Operates On 0-27 Curves

Union Pacific 1764

Union Pacific 1938

Offering better reliability and lower maintenance costs than the higher powered SD-45, EMD's SD40-2 enjoyed a long production run of 3,100 units. The 3,000 horsepower diesel was the primary motive power for many railroads throughout the 1970's and 80's. Introduced on January 1, 1972, the SD40-2 had become the best-selling 6-axle road switcher in history by December 31, 1978. One of the most striking features of the EMD workhorse was its long "back porch" or decking that extended in front and behind the locomotive's cab. These porches differentiated the SD40-2 from its earlier cousin, the SD35 and were the result of the SD40-2's requirement for a longer frame, which helped increase the locomotive's tractive effort.

Features:

- Intricately Detailed ABS Body
- Metal Chassis
- Die-Cast Truck Sides, Pilots and Fuel Tank
- Metal Handrails and Decorative Horn
- Proto-Sound 3.0 With The Digital Command System Featuring Freight Yard Proto-Effects
- Operating Metal Couplers
- Cab Figures
- Authentic Paint Scheme
- Metal Wheels and Axles
- Unit Measures: 17 1/2" x 2 5/8" x 3 7/8"
- Operates On O-31 Curves

The 40' Boxcar is widely known as one of the most popular freight cars used by railroads as they transitioned from steam to diesel. In particular the Pullman Standard or PS-1 design was one of the most popular and was widely used by North American railroads. Pullman had been making freight cars for more than half a century when it hit a home run with the PS-1. Introduced in 1947, it set the standard for postwar American freight cars. What made the PS-1 a landmark was its welded construction — an area in which Pullman led the industry. In addition to lighter weight, welding offered superior strength and better resistance to weather and corrosion than contemporary riveted cars.

Like the EMD diesels that became ubiquitous on American railroads, the PS-1 was part of the postwar shift away from customized, railroad-specific locos and cars toward standardized designs produced in large quantities on efficient assembly lines. No wonder the PS-1 was soon followed by the highly successful PS-2 covered hopper, PS-3 open hopper, PS-4 flatcar, and PS-5 gondola.

Two road numbers are available per road name.

Features:

- Intricately Detailed Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes

The Association of American Railroads (AAR) developed a standard design for 50-ton and 70-ton twin offset open hopper cars starting in the late 1920s. The design was modified in the mid 1930s, and through 1960 over 127,000 cars had been built to AAR specifications. Eastern coal carriers amassed the largest fleets - however, the twin offset hopper design was not limited to coal service, with ore and aggregates also being hauled. They could also be found operating in a wide range of services including unit coal trains, blocks of loaded cars destined to a large consignee, and even "loose" single cars headed to smaller customers.

Four road numbers are available per road name.

Features:

- Intricately Detailed, Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Removable coal load included
- (2) Operating Die-Cast Metal Couplers

With an interior height of about 13 feet - 2 feet more than a standard box car - this car is known as a “hi-roof” or “high cube” car for its high cubic capacity. White end panels make railroad crews aware of its extra height, which prevents it from traveling in some areas.

This 50’ 100-ton car is designed specifically for the modern printing industry, which uses large rolls of paper too big for standard box cars. Side-to-floor joints and doorframes are reinforced to accommodate the heavy weight of paper rolls. Longer 60’ versions of this design are widely used for transporting parts for car manufacturing.

Two road numbers are available per road name except GATX Heritage and TTX (On Track for A Cure) which have only one.

Features:

- Intricately Detailed, Durable ABS Body
- Stamped Metal Floors
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Fast-Angle Wheel Sets
- Needle-Point Axles
- (2) Operating Die-Cast Metal Couplers
- Detailed Brake Wheel
- Separate Metal Handrails
- Sliding Car Doors
- 1:48 Scale Dimensions
- Unit Measures: 14 1/2” x 2 5/8” x 4 3/16”
- Operates On 0-31 Curves

† Atlas will donate a portion of the proceeds from the sale of the TTX (On Track For A Cure) car to the Susan G. Komen foundation for breast cancer research.

The original design dates back to the early Fifties, when it was offered in single- and double compartment versions. The name lends itself to the “action” created by an air-permeable fabric lining in the bottom of the compartment. Unloading the car involves pumping air under the lining fluidizing the commodity which in turn is drawn out of the compartment by pneumatic or other means. This type of car was primarily used for sugar, flour, and starch (and sometime certain types of plastics).

Two road numbers are available per road name.

For most of the steam and early diesel eras, tank cars followed a standard design: an 8,000-11,000 gallon tank perched on a flatcar-like underframe. Beginning in the mid-1950s, however, a new design took hold: the tank itself became the structural backbone of the car, eliminating the need for a full-length underframe and making bigger tank diameters possible. But not every shipper needed the much larger capacities that the new tank cars offered. Hence the advent of these "beer can" tank cars in the mid-1960s, with capacities similar to pre-war tankers. They proved ideal for customers who didn't want larger shipments, and also for transporting a wide variety of heavier, denser liquids including industrial acids and foodstuffs. For modelers, they're an ideal counterpoint to longer cars in a modern freight train. This run of Atlas Beer Can Tank Cars gives a quite literal representation with paint schemes representing actual beer brands.

ALL NEW TOOLING!

In 2013, Greenbrier Companies introduced their new design of 89' auto rack, the Multi-Max™. The new design allows for changing configurations from a Bi-Level to a Tri-Level (and back) without adding or removing decks. The racks are fully compatible with existing 89' auto racks. To this date, most of the racks have been built on Greenbrier Companies' own specially designed 89' flat cars. These cars are commonly seen in cuts of other similar autorack cars or a solid unit train of autorack cars. Currently, almost 10,000 cars (with racks) are running on North American rails.

Features:

- Designed in the USA
- All new flat car and superstructure Tooling
- True 1/4" scale details and dimensions
- Operating end doors
- *Removable interior deck (additional deck available separately to convert from Bi-Level to Tri-Level)*
- Newly tooled trucks
- Separately-applied wire grab irons
- Highly detailed side screens to maximize prototypical appearance in scale
- Accurate painting and lettering
- Minimum diameter curve: 42" (3-Rail)
- Minimum radius curve: 36" (2-Rail)
