## PRE-ORDER ANNOUNCEMENTS - SUMMER 2024

**GUARANTEED PRE-ORDER DUE DATE:  
WEDNESDAY SEPTEMBER 4<sup>TH</sup> 2024**

July 2024

Dear Atlas O Scale Model Railroader,

Atlas is celebrating the historic occasion of our 100th Anniversary throughout 2024. Our year long commemoration continues with this Volume 4 Atlas O Premier Catalog edition, featuring Atlas O Scale locomotives, rolling stock, track and accessory products. Stay tuned throughout the year for additional catalogs highlighting the very best Atlas has to offer in all scales.

Catalogs such as this one are the basis of Atlas' distinctive "guaranteed" pre-order system. Before the Research & Development department gives the final go ahead for production, Atlas announces to its customers the products we are preparing to make. This announcement comes in the form of our Atlas Model (HO & N) and Atlas O Premier Catalogs that provide our customers with the opportunity to arrange a guaranteed pre-order if placed by the given deadline. If possible, Atlas will try to fill orders placed after a given deadline, but these cannot be guaranteed. Occasionally, we offer 'Limited Availability' products for which we have speculated on order quantities and therefore these orders cannot be guaranteed. Either way, its best to place orders as soon as possible for your best chances at acquiring a selected product.

This catalog includes opportunities to reserve select Guaranteed Pre-Order Premier Locomotives as well as Master & Premier rolling stock. Atlas O continues the expansion of the O locomotive line with offerings of the Premier C44-9W and GP38-2 Locomotives. These locomotive offerings will come equipped with MTH DCS, Proto-Sound 3.0!

This catalog also includes the release of several rolling stock models in the Master and Premier lines including: Funnel Flow Tank Cars, Crane & Tender sets, 40/53' Rebuilt Well Cars, 55 Ton Coal Hoppers and more! We're also thrilled to announce Premier Madison Heavyweight Passenger Cars and Premier Flat Cars with Trailers. These models are being announced in exclusive paint schemes to celebrate and commemorate the James E. Strates Shows Carnival Train. Flip to pages 40 through 45 for this exciting announcement.

Last, but not least, this announcement brochure serves as a reminder to all our customers, of the extensive line of Atlas O track, accessories, trackside buildings, signal system and other structures that Atlas O has available on a day to day basis. Whether you're rehabilitating an existing layout, or building one from scratch, Atlas O customer service and sales representatives are ready to assist you in whatever way we can to make your layout a reality.

To remain updated on all Atlas O products and special announcements, sign up for the Atlas Insider Email at <https://shop.atlasrr.com>.

Happy Model Railroading,  
Drew Postle, Atlas Sales Manager

<b>TOTAL PIECES ORDERED</b>					

For the first six decades of the diesel era, the main goal of locomotive design was higher horsepower. Introduced in 1993, GE's 4400 hp Dash 9 and its AC-motored sibling, the AC4400CW, were three times as powerful as a typical first-generation diesel and had 10% more horsepower than their immediate predecessor, the Dash 8. A couple years later, GE and then EMD introduced 6000 hp engines, the first single-unit diesels to equal the power of the last and best steamers.

But what was thought to be a breakthrough turned out to be a flop. By the late 1990s, North American railroads had rejected the 6000 hp concept and concluded that the 4300-4400 hp diesel was the Goldilocks locomotive — not too big, not too small, but a versatile, just-right building block for multiple-unit lashups. The horsepower race was over.

The Dash 9, accordingly, turned out to be a best-seller. More than 3600 engines were sold by the end of production in 2004, and most are still hauling freight today. The Dash 9 was the last and best of GE's third-generation diesels; it exemplified the modern locomotive at the turn of the 20th century, with microprocessors ensuring that its 4400 horses were working as efficiently and as often as possible. It rode on GE's brand-new HiAdTM trucks (for high adhesion), with computerized wheelslip control. Also new was a split cooling system that reduced temperatures and prolonged engine life. The Dash 9's wide-nosed North American cab, an option on earlier diesels, was standard equipment, solidifying the new look in road diesels. The Dash 9 was also the first GE diesel not offered with four-wheel trucks, recognizing that 6-axle, 4400 hp freight power was the new normal.

<b>TOTAL PIECES ORDERED</b>						

Produced from 1972 to 1986, the GP38-2 helped inaugurate Electro-Motive's "Dash-2" series of locomotives and became one of EMD's all-time best sellers. With over 2200 engines sold throughout North America, rare was the railroad that did not roster these reliable, second-generation EMD workhorses.

Building on the success of the GP38 introduced in 1966, the Dash-2 model looked almost identical on the outside but incorporated a host of internal upgrades that lowered exhaust emissions and improved reliability, ease of maintenance, and tractive effort. Most significant was the replacement of the maze of hard-wired circuits, switches, interlocks, and relays — which had characterized first-generation diesels and had been the source of many of their service issues — with modular, solid-state electronics. Other improvements toughened the pistons, rings, and bearings of the 2000-horsepower, non-turbocharged model 645 prime mover.

The result was an engine so hard working and dependable that it became as common on American railroads as the F-unit was in the 1950s and '60s. Trains magazine recognized this in 1982 by designating B&O GP38 (a pre-Dash-2 model) as the All American Diesel; the engine resides today in the Baltimore & Ohio Railroad Museum, repainted in its 1982 Chessie System colors.

Many GP38-2s have soldiered on for more than three decades and remain in service today on short lines and regional railroads.

Tank cars are one of the most specialized freight cars on the rails today, with numerous design features and sizes available to handle a wide variety of products. Gases, liquids, slurries, and molten materials are all routinely transported in tank cars, with most being in dedicated commodity service to prevent contamination, or to take advantage of specific car designs.

The Funnel Flow concept – where the middle of the car is lower than the ends – was invented in 1967 by Union Tank Car Company. This distinctive “bent” design is used for products that are unloaded by gravity, and the shape works to funnel the material to the outlet at the lowest point of the car, which results in a faster and more complete unloading process than a standard straight-bottomed tank. This is especially helpful in unloading slurries (kaolin clay, carbonates, etc.) and thick materials such as asphalt or molten sulfur. Other common loads include foodstuffs such as oils, syrups, and molasses, and various chemical products and solvents.

**Features:**

- Intricately Detailed, Durable ABS Body
- Prototypical Paint Schemes
- Die-Cast 4-Wheel Trucks
- Fast-Angle Metal Wheel Sets with Needle-Point Axles
- O Scale Kadee-Compatible Coupler Mounting Pads
- Separate Metal Handrails and Details
- 1:48 Scale Dimensions
- Unit Measures: 11” x 2 5/8” x 4”
- Operates On O-27 Curves

<b>TOTAL PIECES ORDERED</b>					

In the early days of railroading, the job of cleaning up a wreck was usually done by men and horses. The first steam wrecking crane, a relatively small affair with a 20-ton lifting capacity, appeared in 1883. Its maker, Industrial Works of Bay City Michigan, introduced a fully revolving model a decade later. As the product became popular, Industrial Works, now renamed Industrial Brownhoist, and its chief competitor, Bucyrus-Erie of South Milwaukee, introduced larger and larger models to cope with increasing locomotive and car weights. By the World War I era, 120 tons was a common size, and by the Second World War, crane sizes topped out at around 250 tons of lifting capacity.

While a wreck train on the way to a wreck had priority over other traffic, cranes were subject to rather low speed restrictions, typically around 35 mph with the boom trailing and 25 mph if the boom was facing forward. The larger hook closer to the cab was actually the main lifting hook, used for locomotives. The hook at the end of the boom was a lower-capacity auxiliary hook, used when more reach was needed. Slings, chains, and spreader bars were used to attach the hook to the car or locomotive being lifted; the hooks were never attached directly. While some cranes were capable of limited self-propulsion, that was only for positioning at a site, not for travel to and from wrecks or jobs.

Because of their importance and the urgent nature of their work, cranes were usually well maintained and lasted for many decades. Our model represents a typical 250-ton diesel-powered Industrial Brownhoist crane constructed in the post-WW II era; while some of these were built new as diesels, others were upgraded from steam-powered models.

Today wrecking cranes are relatively rare and seldom seen, as most wreck cleanup is done by outside contractors with trucked-in bulldozers and other heavy equipment. Most large railroads, however, still maintain a 250-ton crane or two like our model, just in case.

The crane tender had two jobs: to protect the crane's boom and enable it to be coupled with other cars on the way to a wreck site, and to carry the tools, chains, slings and other gear needed to clear a wreck. Unlike the crane itself, which was a precision piece of gear made by a specialized company, the crane tender was usually a home-built affair, cobbled together from whatever a railroad's shop crew had lying around. Our model represents a typical such car, built from what appears to be an older flatcar and an obsolete bobber caboose, functioning as an equipment shed.

The rest of a typical wreck train usually had the same hand-me-down look. Passenger and freight cars no longer fit for revenue service were recycled into crew, equipment, and tool cars for wreck and maintenance of way service.

Crane and Tender shown together

In the 2000s intermodal containers came in a large variety of shapes and sizes. Common containers in that time ranged from 20', 28', 40', 45', 48' and 53'. This much variety was deemed inefficient by railroads and trucking companies alike in the early part of this decade. Today the most common containers are 20', 40' and 53'. With the phasing out of the once popular 48' containers, TTX had little need for their 48' well cars. These cars were still rather new, most built in the mid to late 1990s. So instead of scrapping cars that were in serviceable condition, TTX opted to start a rebuilding program in which the 48' well cars were shortened to 40' and/or lengthened to 53'.

Features:

- Die-cast body
- Low friction trucks with rotating bearing caps (2-Rail and 3-Rail)
- Detailed brake rigging
- Etched metal walkways
- Minimum radius:
- 3-Rail: 0-54
- 2 -Rail: 36"

During World War I, the US railroads experienced a critical equipment shortage due to increased traffic needs. This 55 Ton Hopper Car was one of the body types designed by the United States Railroad Administration (USRA) to relieve this shortage. Built in 1918, 25,000 of these cars were primarily assigned to the great coal-hauling roads of the east and mid-west. The car design was very successful and later became one of the standard cars of the American Railway Association.

**Features:**

- Upgraded tooling with modern brakewheel arrangement
- Die-cast centerbeam and chassis
- Wire grab irons
- Die-cast stirrups
- Opening, sprung hopper doors
- Die-cast Andrews trucks
- Prototypical painting and lettering
- Die-cast articulated couplers with trainline detail (3-Rail)
- Scale die-cast couplers and 33" wheelsets (2-Rail)

A perfect fit for all Atlas O well cars. This Atlas O 40-foot high-cube container model represents the most common type of international shipping container in use today. Specifically, this model represents a (ISO Type Code 45G1) 40-foot high-cube container found in almost all of today's shipping and leasing fleets. Made from durable corrosion resistant Corten Steel and a strong corrugated design these containers can last up to 20 years in international service. The Type 45G1 became more prevalent in the 2000's and surpassed 40-foot standard height containers in popularity in the 2010's.

\*ISO is the International Organization for Standardization.

**Features:**

- Compatible with all Atlas O well cars and existing 40' container models.
- Detailed door rods, landing pads and corner post
- ISO Type 45G1

Since the 1970s most international freight has been shipped by standardized 20- and 40-foot containers. Some of this huge flow of cargo between countries needs to be refrigerated for the transit. The second most common type of ISO\* container in use is the refrigerated container. Today's refrigerated container design uses high tech composite (plastics and metals) construction and a "picture frame" type refrigeration unit. This Atlas model represents a standard 20-foot refrigerated container (ISO Type Code 22R1) found in many shipping and leasing fleets.

\*ISO is the International Organization for Standardization.

Features:

- Composite materials sandwich-sides design
- Detailed picture window refrigeration unit w/ separate parts
- ISO Type 22R1

1953 was the birth year for the Ford F-100 series of trucks. The designs were pivotal in Ford's line of pickups, as they made significant improvements and body changes which included the design being a bit more "boxy" with less curves. By 1973, Ford had advanced to the "Sixth Generation" of the F-series line. This venerable truck saw improvements over the previous generation's, with front disc brakes, gas tank relocation under the bed, better air conditioning and heating systems, and increased space inside the cab. The F-100 could be found almost anywhere, from commercial use, maintenance of way for railroads, public works, etc. Atlas' recreation of the F-100 would look right at home on your layout parked in a driveway, making a convenience store run, or inservice for the car department in a yard.

Features:

- Chrome plated grille and bumpers
- Plastic headlight and rear tail light lenses
- 1/48th scale

### JAMES E. STRATES SHOWS CARNIVAL TRAIN CARS

View this model in our online store: <https://shop.atlasrr.com/d-722-100th-anniversary-catalog-4.aspx>

# STRATES SHOWS

*Featuring* ONLY THE  
BEST SHOWS  
*and* RIDING DEVICES

Celebrating 101 years of operation in 2024, Strates Shows is a family-owned and operated outdoor amusement and carnival business with headquarters in Orlando, Florida. Founded in 1923 by Greek immigrant James E. Strates as the Southern Tier Shows in Elmira, New York, Strates Shows is one of America's premiere providers of carnival midways, food concessions and games.

Strates transitioned to being a railroad carnival show in 1934 with the purchase of its first five flat cars. The use of railroads allowed the Show to expand from its New York State base of operations to play major fairs across the Eastern Seaboard. By the end of the 1950s, the train number over 50 cars in length. In 1970, Strates begins operating as two separate units. The "Red & Blue" trains would play separate events and combining into one large show and train to play major events like the Erie County Fair in Buffalo, The New York State Fair in Syracuse and the North Carolina State Fair in Raleigh. There were 27 cars on the red train and 23 cars on the blue train. Strates Shows would utilize its heavyweight car fleet until 1972.

On June 23, 1972, Hurricane Agnes dumped 19 inches of rain on Wilkes-Barre, PA. While the rides and concessions trailers were located on higher ground, the Strates Shows coaches were stored at Penn Central's Buttonwood Yard closer to the overflowing Susquehanna River. Quickly rising water engulfed the fleet to heights reaching the top bunks.

So afterwards, the Show acquired six Pullmans and a dining car from the Erie-Lackawanna Railroad to replace the cars damaged in the flood.

## JAMES E. STRATES SHOWS CARNIVAL TRAIN CARS

**View this model in our online store: <https://shop.atlasrr.com/d-722-100th-anniversary-catalog-4.aspx>**

Since 1982, and the end of rail operations by Royal American Shows, Strates Shows has been the last remaining railroad traveling carnival. In 2017, Ringling Bros. Barnum & Bailey Circus announced its closure, ending its circus train tradition, making Strates Shows officially the last show train on American rails. Railroad and carnival historians are hard pressed to find another “show train” operating anywhere in the world.

At the close of the 2019 route, Strates Shows had every intention of taking the show to the rails during the Summer of 2020. Due to the COVID-19 pandemic that banned large-scale gatherings, and

completely shut down the fair industry, the Show sat idle. As fairs returned in 2021, many were forced to open with capacity limits which effected the economics of using a 45-car train. As a result, the company transitioned to using trucks to reach our fairs from Florida to Vermont.

In 2024, Strates Shows announced a limited return to rails to celebrate a 100-year partnership with the Erie County Fair in Hamburg, New York (Buffalo). Atlas is proud to collaborate with the James E. Strates Shows to present the exclusive offerings on the following pages.

For more information regarding the Strates Shows, please visit [www.stratescarnivalcompany.com](http://www.stratescarnivalcompany.com)

Strates Shows Red Train 4 Car Set

Strates Shows Blue Train 4 Car Set

Strates Shows Red Train 2 Car Set

Strates Shows Blue Train 2 Car Set

One of the most iconic pieces of Americana dating from the late 19th and 20th centuries is the traveling Carnival Show. Arriving in a town with a stream of brightly colored wagons and trucks, the traveling shows featured a menagerie of exotic animals, exciting rides, unique acts and performances and large Midways with games of skill (chance) and concessions that most small towns had never seen. These shows (following an arrival of an advanced advertising and marketing team) set up tents and booths in local fields and would stay on average a week in one location, then move on to another town from Spring to Fall, returning to a “winter quarters” where the circuit for the next year would be planned and new attractions would be created.

In 1932, the newly-renamed James E. Strates Shows (originally founded as Southern Tier Shows in Elmira, NY in 1923) rented two railroad boxcars to help move the rapidly growing carnival show. By 1934, the Strates Show became a 5 railcar show, expanding to 10 before the end of that year. The switch to rail eventually included several passenger cars as well as over 60 flatcars moving wagons and rides. In 1970, the show was so large that two complete units (the Red and Blue trains) were fielded.

The passenger cars in these Red and Blue trains received complimentary paint schemes, and the cars were individually named based on the fairs they would be attending. The Atlas Premier Madison Passenger Cars in this run depict this scheme, which was the last to appear on the heavyweight cars used in the years surrounding the Strates 50th anniversary season.

### ATLAS PREMIER O FLAT CAR WITH TWO 20' TRAILERS JAMES E. STRATES SHOWS

[View this model in our online store: https://shop.atlasrr.com/d-722-100th-anniversary-catalog-4.aspx](https://shop.atlasrr.com/d-722-100th-anniversary-catalog-4.aspx)

# STRATES SHOWS

For more information regarding the Strates Shows, please visit [www.stratescarnivalcompany.com](http://www.stratescarnivalcompany.com)

One of the most iconic pieces of Americana dating from the late 19th and 20th centuries is the traveling Carnival Show. Arriving in a town with a stream of brightly colored wagons and trucks, the traveling shows featured a menagerie of exotic animals, exciting rides, unique acts and performances and large Midways with games of skill (chance) and concessions that most small towns had never seen. These shows (following an arrival of an advanced advertising and marketing team) set up tents and booths in local fields and would stay on average a week in one location, then move on to another town from Spring to Fall, returning to a “winter quarters” where the circuit for the next year would be planned and new attractions would be created.

In 1932, the newly-renamed James E. Strates Shows (originally founded as Southern Tier Shows in Elmira, NY in 1923) rented two railroad boxcars to help move the rapidly growing carnival show. By 1934, the Strates Show became a 5 railcar show, expanding to 10 before the end of that year. The switch to rail eventually included several passenger cars as well as over 60 flatcars moving wagons and rides. In 1970, the show was so large that two complete units (the Red and Blue trains) were fielded.

The Premier Flat Car with Two 20' Trailers is representative of the many flatcars used by the Strates Shows, and features colorful and accurate trailer artwork to accompany both the Red and Blue trains. These vivid trailer designs were originally created by famous show painter Duke Ash and epitomize the grand spectacle of this enduring part of American history.

## AVAILABLE IN 3-RAIL ONLY.

<b>TOTAL PIECES ORDERED</b>			

Convert your Hi-Rail Wheel (3-Rail) or Scale Wheel (2-Rail) equipped diesel locomotive power trucks for operation on scale (2-Rail) or Hi-rail track (3-Rail). Only applicable for Atlas Premier series locomotives.

Each kit contains enough wheel sets for (1) power truck. Scale Wheels are polished, turned metal with scale treads and flange heights. Hi-Rail Wheels are powdered metal and include traction tires. Both Hi-Rail and Scale wheel sets are pre-mounted on metal axles with one insulated side for use on 2-rail O Scale track systems. One wheel set in each kit contains pre-mounted drive gears.

Features:

- (4 or 6) Scale (2-Rail) or Hi-Rail (3-Rail) Wheel Sets
- Insulated Axles
- All-Metal Wheels & Axles
- Fully Assembled, Ready-to-Drop-In

6" Telephone Poles Assembled and Painted with (2) Crossarms  
*shown unpainted*

(6) 9" Telephone Poles Assembled and Painted with (4) Crossarms

### ESTIMATED ARRIVAL: 2ND QUARTER 2025

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP/ UNIT
	66929	(6) 6" Telephone Poles Assembled and Painted with (2) Crossarms	\$22.95
	66930	(6) 9" Telephone Poles Assembled and Painted with (4) Crossarms	\$24.95
<b>TOTAL PIECES ORDERED</b>			

More accurately known as line poles, these telephone poles could be found along railroad tracks from the earliest days of the railroading until today.

Both the 6 and 9 inch assembled poles come ready to use on your model railroad. They can be mounted using either the enclosed oval bases, or by inserting the pin on the end of the pole directly into a hole drilled in the layout. If using the bases, simply twist them or cut them from the sprue using a sharp hobby knife. If you prefer to mount them using the pin, drill a 5/32" hole at the desired location.

#### Features:

- 1/4" Scale Dimensions
- Ready To Use
- Easy To Mount

Scenery not included.*

# The MVP of Your Layout

**Modeled for Realism:** The scale-sized plastic ties have a realistic wood grain, the tie plates have spikes, the rail joiners have authentic bolt detail and the center rail is blackened.

**Versatility:** Every track piece has been specially engineered to fit precisely together in an infinite variety of combinations without the need for custom cutting and fitting.

**Performance:** We chose a SOLID nickel silver T-rail for extra stability and superior electrical conductivity. In addition, the wide, flat surface of the rails provides far greater wheel/rail contact and better traction than tubular track. What's more, solid rails absorb sound better than tubular track so you can enjoy the sounds of your locomotive.

### 3-RAIL FEATURES:

- SOLID nickel silver rail for realistic shape, sounds and rust prevention
- Super joiners for tight fit and superior electrical connection
- Large and growing list of track: 10 different diameters (O-27- O-108), 16 different switches, 6 crossings, all the straight pieces you could ever want, flex track and more!
- Geometrically exact layout construction
- UV compatible: great for both indoor and outdoor use

Item #6094 - Track Screws

Item #6095  
Tubular Transition Joiners (6 pcs.)

Item #6011 - 0-81 Full Curve

### 2-RAIL FEATURES:

- Code 148 Solid Nickel Silver Rail
- American prototype ties and tie spacing with correct spike, and tie plate and bolt details
- Dark brown tie strip
- Turnouts feature highly detailed metal insulated frogs and points
- Metal frog can be powered if desired
- UV compatible: great for both indoor and outdoor use

Item #7050 - 10" Straight

Item #7081 - 45° Crossing

Item #7090  
Terminal Joiners (1 pair)

Item #7056 - 2-Rail  
40" Flex-Track® with  
Simulated Wood Ties

Item #6056 3-Rail  
40" Custom Flex-Track  
with Simulated Wood Ties

### Books & Instructional Guides

#### #6008 ATLAS O 3-RAIL LAYOUT BOOK

This book is a must-have for those who have discovered the superiority of the Atlas 21<sup>st</sup> Century Track<sup>®</sup> System. Everything you need for successful layout planning and building is here!

#### #6009 ATLAS O EMPIRE BUILDING FROM START TO FINISH

This book by Stan Trzoniec and the Atlas Model Railroad Staff focuses on the love of the World's Greatest Hobby and the construction of Atlas' O-6 Layout, "Empire Building" - from construction to scenery and more!

#6009 ATLAS O EMPIRE BUILDING FROM START TO FINISH

### Atlas Track Planning Software

Atlas is proud to offer Atlas Track Planning Software to help you design your dream layout. This software allows you to create and customize a layout, view it as a 3D model and then generate a shopping list to make your dream layout a reality.

**Note - this software works on Windows OS only.**

#### Features:

- Select pieces from Atlas' 9 track lines and build your dream layout with ease
- Model flex-track routes in an easy, intuitive and realistic way
- Arrange your layout on multiple levels with different heights and grades
- Easily draw figures to create train stations, houses, industries, roads and infrastructure
- Use the 3D tool to bring your layout to life
- Measure distances and track section lengths
- Export, Print or Share your layout with your friends
- View and print a list of the Atlas track pieces you need to begin building your layout
- Layout libraries will be available with future library updates
