PRE-ORDER ANNOUNCEMENTS - FALL 2025

**PRE-ORDER DUE DATE:
WEDNESDAY NOVEMBER 26TH 2025**

October 2025

Dear O Scale Model Railroader,

Welcome to the Atlas O Premier Catalog, Fall 2025 Edition. This catalog features O Scale Master, Premier and Trainman locomotives and rolling stock.

Catalogs such as this one are the basis of Atlas' distinctive pre-order system. Before the Research & Development department gives the final go ahead for production, Atlas announces to its customers the products we are preparing to make. This announcement comes in the form of our Atlas Model (HO & N) and Atlas O Premier Catalogs that provide our customers with the opportunity to arrange pre-orders if placed by the given deadline. If possible, Atlas will try to fill orders placed after a given deadline, but these cannot be guaranteed. Occasionally, we offer 'Limited Availability' products for which we have speculated on order quantities and therefore these orders cannot be guaranteed. Either way, its best to place orders as soon as possible for your best chances at acquiring a selected product.

This catalog includes opportunities to reserve select Pre-Order Premier Locomotives as well as Master & Premier rolling stock. Atlas O continues to roll out O locomotive line with offerings of the Premier SD70M and GP30 Locomotives, as well as Master line MP15DC Locomotives. All of these locomotive offerings will come equipped with MTH DCS, Proto-Sound 3.0!

This catalog also includes the release of several rolling stock models in the Master and Premier lines including: Scale Test Cars, Coalporters, Hy-Cube Box Cars, Tanks Cars and more - with authentic prototypical paint schemes.

Last, but not least, this announcement brochure serves as a reminder to all our customers, of the extensive line of Atlas O track, accessories, trackside buildings, and other structures that Atlas O has available on a day to day basis. Whether you're rehabilitating an existing layout, or building one from scratch, Atlas O customer service and sales representatives are ready to assist you in whatever way we can to make your layout a reality.

To remain updated on all Atlas O products and special announcements, sign up for the Atlas Insider Email at <https://shop.atlasrr.com>.

Happy Model Railroading,
Ross Medine, Atlas Sales Manager

New Catalog Features:

- ***New Paint Scheme Index on pages 4-5***
Check out this quick reference to help you find all the brand new paint schemes being announced in this catalog!
- ***A Detailed Look Behind the Paint Scheme on pages 22-23***
This new feature gives you an in-depth look at a few select paint schemes offered on models from this catalog!

Products bearing American Refrigerator Transit; Chicago & Eastern Illinois (C&EI); Chicago and North Western Railway Company (CNW); The Denver & Rio Grande Western Railroad Company (D&RGW); Katy; Missouri-Kansas-Texas Railroad Company (MKT); Missouri Pacific (MP); Pacific Fruit Express (PFE); Southern Pacific (SP); St. Louis Southwestern Railway Company (SSW); Cotton Belt; Texas & Pacific (T&P); Union Pacific (UP); Union Pacific Fruit Express (UPFE); Western Pacific (WP) marks are made under trademark license from Union Pacific Railroad Company.

Atlas O Catalog-Tariff Based Pricing Notice - The prices shown in this catalog are based on the current U.S. tariff rate of 30% on imports from China. Should this rate change prior to product arrival, final pricing may be adjusted—either upward or downward—based on the tariff rate in effect at the time of importation. Atlas understands that evolving tariffs affect every part of the supply chain—from production and logistics to wholesale and retail pricing. We are committed to minimizing those effects whenever possible, including absorbing increased costs where feasible to support long-term relationships and preserve market stability. We encourage all customers—dealers, distributors, and consumers—to continue placing orders and pre-orders knowing that Atlas is actively managing the impact of tariff changes. For updates on trade policy and industry advocacy, visit the Hobby Industry Coalition at hobbycoalition.org, an initiative proudly supported by Atlas.

In 1992, GM's Electro-Motive Division (EMD) introduced the new SD70 Series of engines, which come in the standard direct-current (DC) and alternating-current (AC) models. One glance at the design of this engine reveals the enormous technological gains in railroading. The SD70 boasts a 32-bit 16mHz control microprocessor named the EM2000. This computer works with the Integrated Cab Electronics (ICE) system to collect, analyze, and display a range of accurate-to-the-second information, such as speed, amps, throttle position, air brake operation, and cab signals. All of this information is displayed on full-color liquid crystal displays that replace the gauges and indicators found on earlier diesels.

The 70 Series also employs the HTRC (high-traction three-axle radial) truck that reduces rolling resistance in curves and lateral loads and therefore reduces wear on wheels. EMD estimates this will increase wheel life by 20 percent. These innovations have led to brisk sales of both the SD70M (DC version) and SD70MAC (AC version).

**** Prices are subject to change due to board availability/cost.**

ATLAS PREMIER O GP30 LOCOMOTIVE

Product Info: <https://shop.atlasrr.com/d-741-fall-2025-premier-o-catalog.aspx>

In the summer of 1960, EMD's sales team got an unpleasant surprise. General Electric, which had divorced partner Alco in 1953 and was thought to be making only export diesels, had suddenly fielded an American road switcher. Worse yet, GE's upstart U25B, regarded today as the first of the second-generation diesels, was more powerful, more modern, and required less maintenance than EMD's flagship offering, the GP20. Perhaps fortunately for EMD, the railroad industry was in a slump at the time; as the designers at La Grange rushed a competitive model into production, not a single U-boat was sold that first year.

To create a new engine in a short time frame, EMD's designers borrowed the frame and trucks from the GP20 and uprated its 2000 hp 567 diesel to 2250 hp – still 250 hp short of the U25B. They also borrowed one of the U25B's most revolutionary features: a centralized air cooling system with a self-cleaning filter that pressurized the engine room to keep out dust and dirt. This replaced the myriad air filters in older diesels and significantly reduced maintenance.

To fit the pressurized air system and other upgrades into the existing GP20 frame, the only place to go was up. EMD stacked the air system, turbocharger and electrical gear behind the cab, and a higher carbody was needed, giving the new engine a unique profile not seen before or since in the EMD lineup. For styling assistance, EMD turned to the GM Automotive Styling Center in Troy MI. The result was a unique cab roof profile and a characteristic rooftop hump, to house the intakes for the central air system and dynamic brake cooling.

According to EMD's normal naming practice, the new engine should have been called the GP22 – but that hardly sounded competitive with the U25B. So the marketing department dubbed the new model the GP30, claiming it had 30 distinct improvements over the GP20.

In fact, the GP30 turned out to be an excellent locomotive. During a production run of just over two years, from July 1961-November 1963, 948 units were sold to railroads across America, nearly double the quantity of U25Bs sold during six years of production. Although slightly less powerful, the Geep was a known quantity, with an engine and other parts familiar to virtually every railroad's maintenance department. Advertised by EMD as a combination "high speed and heavy drag" locomotive, the GP30 immediately took over from first generation diesels as premier mainline freight power. Although bumped to lesser service by more powerful engines later in life, many served over four decades, considerably longer than the expected service life of a diesel. Some railroads, like the Burlington Northern and Chessie System, operated rebuild programs that upgraded old GP30s to higher specs and kept them running late into the 20th century.

Features:

- Intricately Detailed, Durable ABS Body
- Die-Cast Truck Sides, Pilots and Fuel Tank
- Metal Chassis
- Metal Handrails and Horn
- Moveable Roof Fans
- Metal Body Side Grilles
- Detachable Snow Plow
- (2) Handpainted Engineer Cab Figures
- Authentic Paint Scheme
- Metal Wheels, Axles and Gears
- (2) Remote-Controlled Proto-Couplers
- O Scale Kadee-Compatible Coupler Mounting Pads
- Prototypical Rule 17 Lighting
- Directionally Controlled Constant Voltage LED Headlights
- Lighted LED Cab Interior Light
- Illuminated LED Number Boards
- Operating LED Ditch Lights
- (2) Precision Flywheel-Equipped Motors
- Operating ProtoSmoke Diesel Exhaust
- Onboard DCC/DCS Decoder
- Locomotive Speed Control In Scale MPH Increments
- Proto-Scale 3-2 3-Rail/2-Rail Conversion Capable
- 1:48 Scale Proportions
- Proto-Sound 3.0 With The Digital Command System Featuring Freight Yard Proto-Effects
- Unit Measures: 18 3/4" x 2 3/4" x 3 7/8"
- Operates On O-42 Curves

Offering better reliability and lower maintenance costs than the higher powered SD-45, EMD's SD40-2 enjoyed a long production run of 3,100 units. The 3,000 horsepower diesel was the primary motive power for many railroads throughout the 1970's and 80's. Introduced on January 1, 1972, the SD40-2 had become the best-selling 6-axle road switcher in history by December 31, 1978. One of the most striking features of the EMD workhorse was its long "back porch" or decking that extended in front and behind the locomotive's cab. These porches differentiated the SD40-2 from its earlier cousin, the SD35 and were the result of the SD40-2's requirement for a longer frame, which helped increase the locomotive's tractive effort.

This special red, white, and blue Semiquincentennial paint scheme was designed in-house by the Wheeling and Lake Erie railroad to commemorate the 250th anniversary of U.S. independence in 2026. The inspiration for the Wheeling and Lake Erie #1776 Semiquincentennial paint scheme came from the Norfolk & Western bicentennial locomotive painted back in 1976, but with distinctive Wheeling and Lake Erie elements like chevron striping, flying "speed" letters, and a layout intended so the full red/white/blue scheme is visible from the front. Some notable cosmetic features include a polished brass bell, raised-letter number boards, and a restored Leslie air horn.

Features:

Now with Ditch Lights as appropriate per road name.

The 1500hp MP15DC was designed by EMD as a replacement model for the successful SW1500 switcher. The longer frame of the MP15DC allowed for increased fuel capacity and the use of Blomberg road trucks; increased sand capacity was also offered as an option. The first MP15DCs were built for Missouri Pacific in February 1974 and a total of 351 units were produced through the end of production in January 1983.

Atlas O's model includes the three different styles of long hood that were common to the MP15DC throughout production: standard hood, hood with square air filter box and hood with angled air filter box (the air filter box is located in the area immediately ahead of the cab). In addition, various styles of hood and cab-end sand boxes are being offered. The model will also include a see-through cab with various interior details and crew figures included.

Features:

- Separately-applied scale detail parts include: windshield wipers, metal grab irons, coupler cut levers, multiple-unit hoses, snow plow, train line hoses, fine scale handrails, and more!
 - See through step detail on sill
 - Illuminated dials and gauges in the cab
 - Powerful motor with dual flywheels
 - Etched metal radiator grilles
 - Painted crew members
 - Directional lighting with golden-white LEDs
 - Improved power-pick up on 3-Rail version
 - Ditch Lights (where appropriate per roadname)
- 3-Rail DCS Features: (2025 or later)
- Proto-Sound 3.0 With the Digital Command System Featuring Freight Yard Proto-Effects
 - Locomotive Speed Control In Scale MPH Increments
- 2-Rail Gold Features:
- DC/DCC

A Detailed Look Behind

Atlas Master® O Gunderson Hy-Cube Box Car - TTX

Atlas model rendering

Prototype photo of the TTX Box Car, courtesy of Dave Casdorff

In 1974 the Trailer Train Company (now TTX) saw a HUGE business opportunity. In the early 1970s boxcars were being hoarded by individual railroads who prioritized their own freight over interline traffic (shipments traveling over multiple railroads). Because each railroad wanted to keep its boxcars in its own network, interchange traffic was suffering, and delays became common. To resolve this problem TTX introduced their subsidiary company "Railbox" that shared boxcar specific railcar pools among class I railroads. What is railcar pooling you ask? A railcar pool is a shared fleet of freight railcars used by multiple railroads or shippers, rather than being owned and operated by just one company. Basically, a U-Haul moving trailer for railroads! These Railbox cars could freely travel between railroads without getting tied up in ownership rules. Paving the way for today's fleet of iconic black and yellow large 60' TBOX style box cars we see nationwide today! The NEW Atlas Master TTX O Scale Gunderson Hy-Cube model is a scale replica of today's modern 60' Hy-cube style box cars that the TTX company started operating in the early 2000s to the present day. Making it a must have piece of rolling stock for any modern era O scale layout!

Atlas O Master® 53' Evans Double Plug Door Box Car - USLX Tropicana

Atlas model rendering

Since its founding in 1947 the Tropicana Juice Company has utilized rail transportation - so much so that Tropicana has become famous for its "Juice Trains". Believe it or not, Tropicana has their own trains to this day! Beginning in Bradenton, FL, some of the routes exceed 1,000 miles terminating in Kearny, NJ, Cincinnati, OH, and City of Industry, CA. Contrary to popular belief, not all Tropicana cars are refrigerated. This particular Atlas Master USLX (United States Railway Leasing Co.) paint scheme offering was leased by and decorated for Tropicana and is used for the transportation of orange juice without the use of refrigeration - instead, the interior is insulated to keep the goods inside the box at a stable temperature. The insulation is greatly needed due to the amount of time these perishable goods spend in transit. Whether it's hot or cold on your layout, you can depend on our Atlas Master 53' Double Plug Door Box Car model to get the job done.

CHECK OUT ATLAS' MODEL - NOW AVAILABLE FOR PRE-ORDER ON PAGES 34-35!

Atlas O Master® 11,000 Gallon Tank Car - Tenneco Chemicals (VENX)

Atlas model rendering

During the 40s and 50s, one of the largest and most profitable natural gas companies in the US was Tennessee Gas and Transmission, which in 1961 was reorganized along with Bay Petroleum under Tenneco management, becoming a full subsidiary in 1966. Tenneco rapidly grew throughout the 1960s, acquiring Hayden Newport Chemical Corporation in 1965 - just before the build and painting date of the leased tank cars included in this run. These cars were seen across the East Coast and were recognizable for their overall blue color where the majority of tank cars of the period were black or gray. Tenneco went on to acquire not only specialty chemical and petroleum assets, but Newport News Shipbuilding, packaging manufacturers, machinery manufacturers such as J.I. Case (and International Harvester by the 1980s) and is still one of the largest diversified companies in the world.

A scale test car is a type of railroad car in maintenance of way service. These cars serve the purpose of calibrating the scales used to weigh loaded railroad cars. Scale test cars are of a precisely known weight so that the track scale can be calibrated against them. Scale test cars are also weighed for various purposes, such as Axle Load Limits, and Customer Billing. Because the cars must be a precise weight, most of them did not have airbrakes due to the change in weight from brake shoe wear. Due to the lack of brakes, these cars were to be put on the rear of the train.

Features:

- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- Fast-Angle Wheel Sets
- Needle-Point Axles
- 1:48 Scale Dimensions
- Operates On O-31 Curves (3-Rail)

Available in 3-Rail Only.

ATLAS PREMIER O COALPORTER

Product Info: <https://shop.atlasrr.com/d-693-spring-2023-o-scale-catalog.aspx>

Union Pacific

The Coalporter is one of the latest evolutions in the more-than-150-year history of the American coal hopper. But technically speaking, it's not a hopper. It's a high-sided gondola, because it lacks the bottom-opening doors that characterize a true hopper. The only way to unload a Coalporter is to turn it upside down, which is exactly what happens at the rotary unloading facilities at factories and power plants served by Coalporter trains.

The Coalporter was developed by Bethlehem Steel Car in 1978, in an effort to create a higher-capacity, more efficient coal car. The traditional bottom hoppers were replaced by twin tubs, or troughs, that filled the space between the trucks. These increased the cubic capacity of the car and gave the added advantage of a lower center of gravity for better tracking. These original Coalporters were steel-bodied, but a drop in aluminum prices in the mid-1980s opened the door to the introduction of the aluminum-bodied BethGon Coalporter in 1985.

The switch to aluminum shaved five tons off the car's weight – meaning that each car could carry five tons of additional payload, or an additional 575 tons of coal in a typical Coalporter unit train. Coalporters generally operate in solid unit trains. One end of each car is equipped with a rotary coupler, to allow a train to be fed through a rotary unloader without uncoupling the cars. Our highly detailed Premier model duplicates this prototype feature and also offers separately added metal grab irons and a removable coal load.

Features:

- Intricately Detailed Durable ABS Body
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Colorful, Attractive Paint Schemes
- Operating Die-Cast Metal Couplers
- Fast-Angle Wheel Sets
- Needle-Point Axles
- 1:48 Scale Dimensions

Atlas is committed to minimizing disruptions and maintaining reliable supply.*

Available in 3-Rail Only.

The Atlas Operating Log Dump car continues in the long tradition of adding animation and action to model railroad operations for all ages. Based on the design of the prototypical DIFCO Operating Dump car, the Operating Log Car has a higher stake-body side - perfect for transporting and delivering larger construction loads such as pipes or logs (log load included). Cars of similar design have been used by many railroads in MOW service, as well as on shortlines and logging railroads.

Features:

- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Decorative Brake Wheels
- Fast-Angle Wheel Sets
- Requires 1 pc. of 6097 Accessory Rails track to operate this car
- Log load included
- Needle-Point Axles
- Die-Cast Metal Body
- Operating Dump w/ Shake Action
- Unit Measures: 12 1/16 x 2 5/8 x 2 1/2
- Operates On O-31 Curves

Model shown with included log load (above) and
in operation dumping a load trackside (below).

The high-cube, high-capacity plate F box car is a staple of modern railroading. The iconic "TBOX" nicknamed 60' modern plate F box car design started appearing across America's rail network in the early 2000s. The Atlas O Master Series model represents the original 2003 Gunderson prototype of this plate F box car design. Many other freight car builders have built similar versions of the 60' plate F box car since then as well including NSC, Trinity, FreightCar America, Trenton Works and Greenbrier. Making the plate F box car one of the most common freight cars in North America! What makes these modern plate F box cars so special is that the 60' car body provides additional cubic feet of loading space for lighter loads, as compared to the previous standard 50' box cars. This allows these plate F box cars to carry an extremely wide range of commodities including canned goods, paper, lumber, pulpboard, beer, salt, bagged flour, automotive parts just to name a few!

Features:

- Intricately detailed ABS body
- Etched metal safety platforms
- Finely die-cast metal ladders and stirrups; Highly detailed die-cast underframe
- Accurate painting and lettering
- 100-ton roller-bearing trucks with rotating bearing caps
- Simulated paint overspray on roof (Where appropriate)
- Minimum diameter curve: 0-54 (3-Rail)/ Minimum radius curve: 36" (2-Rail)

A portion of the proceeds from the sale of the TTX (On Track for a Cure) models will be donated to the Susan J. Komen Foundation.

Prices shown reflect a 30% U.S. tariff on imports from China. Final pricing may adjust if tariff rates change before product arrival. Atlas is committed to minimizing disruptions and maintaining reliable supply.

The 53' Double Plug Door Box Car was manufactured in the late 1960s and early 1970s by the Evans Company and was used primarily to haul a selection of dry goods such as produce, wood and paper products, as well as canned goods. Our model is of the insulated RBL variant featuring a 16 foot opening and double plug doors. This particular car is leased by and decorated for Tropicana and is used for the transportation of orange juice without the use of refrigeration - instead, the interior is insulated to keep the goods inside the box at a stable temperature. Whether it's hot or cold on your layout, you can depend on this car to get the job done.

Features:

- True 1/4" scale dimensions and details
- Die-cast floor with complete undercarriage detail
- Separately-applied ladders, brake wheel, safety platform, door bars and door handles
- Die-cast sprung 70-ton roller bearing trucks
- Accurate painting and lettering
- Two rail units include scale wheels and Kadee®-compatible scale couplers
- Minimum diameter curve (3-rail): 0-31
- Minimum radius curve (2-rail): 36"

Prices shown reflect a 30% U.S. tariff on imports from China. Final pricing may adjust if tariff rates change before product arrival.
Atlas is committed to minimizing disruptions and maintaining reliable supply.

Propane or Liquefied Petroleum Gas (LPG) is both a naturally occurring product and a by-product of the refining process. During the 1940s, the petroleum industry began marketing LPG as a cleaner and more efficient fuel than the existing coal and oil. Transporting LPG requires specially designed high-pressure tank cars. During the early 40s the only ACF tank car that qualified was the 10,500 gallon high-pressure tank car. After the war, ACF set out to design a whole new car for the emerging industry. As a result the 11,000 gallon tank car was introduced by ACF in 1947. Many thousands were built up through the mid-1950s.

Features:

- Die-cast chassis
- Tank fittings and safety placards
- 50-ton friction-bearing trucks
- Separately-applied handrails and grab irons
- Dome and ladder variations as per the prototype
- Accurate painting and printing
- Minimum diameter curve (3-rail): O-31
- Minimum diameter curve (2-rail): 24"

*Prices shown reflect a 30% U.S. tariff on imports from China. Final pricing may adjust if tariff rates change before product arrival.
Atlas is committed to minimizing disruptions and maintaining reliable supply.*

	70 000 243	O Signal, Hooded Modern, Head Only (pr)	\$29.95
	TOTAL PIECES ORDERED		

The latest addition to the Atlas All-Scales Signal System brings the line of Hooded Modern signals currently available in HO Scale to O scale, providing modern-era modelers with a prototypically accurate signal seen across the US. These signals have commonly been referred to as "Darth Vader" style, given the shape and extent of the single hood protecting the signal glasses, which resembles the famous helmet from Star Wars. Functionally, these hoods keep the signal aspects clear from being blocked by snow or other elements, and the extended hood sides help to ensure that train crews can distinguish the aspects more easily from background lights and also minimize stray light illumination across the face of the targets for enhanced visibility during daylight hours.

Features:

- Common signal and mast styles currently in use across the US
- Three-color Safetrans hooded signal heads
- Finely detailed etched-metal platform and railings
- Integrated mini-plug connectors for seamless operation with the Atlas Universal Signal Control Boards and cables
- Common Anode wiring

*Prices shown reflect a 30% U.S. tariff on imports from China. Final pricing may adjust if tariff rates change before product arrival.
Atlas is committed to minimizing disruptions and maintaining reliable supply.*

ORDER IN PIECES	ITEM	DESCRIPTION	MSRP/ UNIT
		NEW	
	70 000 049	Switch Accessory Module (compatible with N, HO & O track lines)	\$59.95
	TOTAL PIECES ORDERED		

The new Atlas Switch Accessory Module is an All Scales electronic "Swiss Army" knife for making common track wiring scenarios easier. More than just a non-derail circuit board (similar to the old Atlas 6924), the Switch Accessory Module (or SAM) incorporates features that support and simplify reverse loop wiring, power routing, frog wiring, twin coil AND stall motor switch machines in all scales! In addition to providing simple panel lighting outputs, the Atlas SAM supports the direct connection of two signals at once (such as dwarf or full-mast signals available in the plug-and-play Atlas All Scales Signal product line) to provide for configurable on-layout turnout indication on both sides of the switch! It is also an indispensable tool for wiring 3-rail double crossovers in O scale.

Compatible with N, HO & O Track Lines!

70 000 049 Switch Accessory Module

Prices shown reflect a 30% U.S. tariff on imports from China. Final pricing may adjust if tariff rates change before product arrival.

Atlas is committed to minimizing disruptions and maintaining reliable supply.

GSC Gunderson 60' Hy-Cube Box Car:

Add a splash of color to your modern mixed freight train with this vibrant TTX graffiti car! These TTX 60' Hy-Cube Box Cars can be seen on almost all modern mixed freight trains across North America. This special GSC graffiti car features prototypical based graffiti on both sides! One side features a intense green and purple full color moniker tag, while the other side features a very detailed "Happy Veterans Day" piece. Sure to be a unique piece of rolling stock on any layout! For a full list of features, see page 33.

GSC 11,000 Gallon Tank Car: This 11,000 gallon tank car scheme for the Golden Spike Club is truly a "one of a kind" car. A single car leased by Lehigh Petroleum, it was among the first of the great increase of cars specifically designed for propane transport, rolling off the assembly line in the same month as World War II ended. This car was regularly seen operating across the CV from its home at the Lehigh Oil facility on Shipping Street in the Thamesville section of Norwich, CT. While the LGX reporting mark had disappeared from the ORER records by 1960, Lehigh Oil was one of the largest employers in Norwich, and was extremely successful up through the 1970s. For a full list of features, see page 37.

ATLAS O TURNTABLE

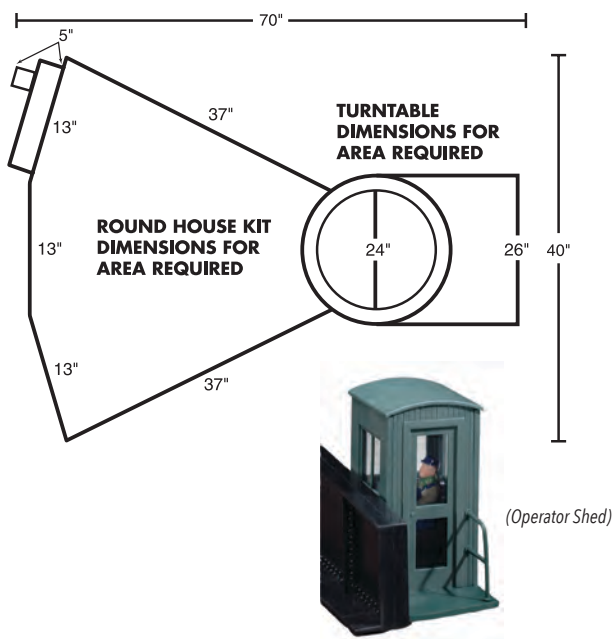

Product Info: <https://shop.atlasrr.com/p-53322-o-scale-turntable.aspx>

O TURNTABLE - In the steam era, many railroads used turntables to turn locomotives for their next journey. Railroads still use turntables to assist in the maintenance of diesel locomotives and rolling stock. Based on a Santa Fe prototype, Atlas O has realistically duplicated its above ground details, so adding a working turntable has never been simpler. What's more, everything is included for easy tabletop installation.

FEATURES:

- New - larger and more powerful motor
- New - flat cogged anti-slip belt
- New - deck support with more roller bearings for greater support of heavier locomotives
- New - redesigned metal contacts to power the rotating track
- Drive assembly is hidden under the utility shed
- Table diameter: 24"
- Proven Geneva-gearing for positive indexing
- Can be used for both 3 rail and 2 rail operation
- Will run on AC or DC power
- Compatible w/ TMCC & DCS (using TMCC or DCS accessory interface)
- Compatible with DCC (using a stationary decoder)
- Molded in appropriate colors
- Complete hook-up instructions
- Easy tabletop installation
- Motor Drive included in box for smooth and easy operation

contains: 1- 70 000 068 O Type G Signal
1- 70 000 046 Universal Signal Control Board
1- 70 000 050 Signal Attachment Cable
1 - Quick Start Guide

Item #70 000 047 - Interlock Control Module

**See Pages 38-39 for our
new Hooded Modern
O Scale Signal Products!**

Item #70 000 064 - O Signal,
Color Position Light,
Single Head

Item #70 000 068 - O Signal, Type G, Single Head

Item #70 000 070 - O Signal, Type SA, Single Head

ATLAS O TRACK & ACCESSORIES

Product Info: <https://shop.atlasrr.com>

Atlas is proud to offer a wide variety of track in both 2- and 3-Rail. Our track is time-tested and modeler approved and is crafted to be the MVP of your layout.

***Modeled for Realism:** The scale-sized plastic ties have a realistic wood grain, the tie plates have spikes, the rail joiners have authentic bolt detail and the center rail is blackened.*

***Versatility:** Every track piece has been specially engineered to fit precisely together in an infinite variety of combinations without the need for custom cutting and fitting.*

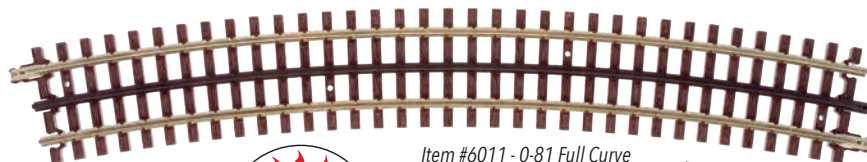

***Performance:** We chose a SOLID nickel silver T-rail for extra stability and superior electrical conductivity. In addition, the wide, flat surface of the rails provides far greater wheel/rail contact and better traction than tubular track. What's more, solid rails absorb sound better than tubular track so you can enjoy the sounds of your locomotive.*

3-RAIL FEATURES:

- SOLID nickel silver rail for realistic shape, sounds and rust prevention
- Super joiners for tight fit and superior electrical connection
- Large and growing list of track: 10 different diameters (O-27- O-108), 16 different switches, 6 crossings, all the straight pieces you could ever want, flex track and more!
- Geometrically exact layout construction
- UV compatible: great for both indoor and outdoor use

Item #6094 - Track Screws

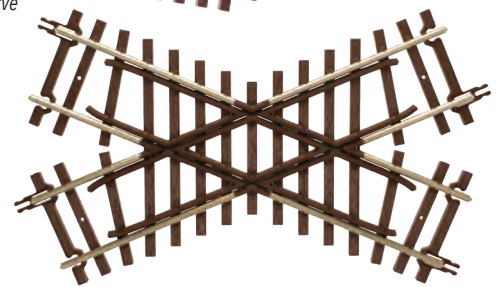

Item #6011 - 0-81 Full Curve

2-RAIL FEATURES:

- Code 148 Solid Nickel Silver Rail
- American prototype ties and tie spacing with correct spike, and tie plate and bolt details
- Dark brown tie strip
- Turnouts feature highly detailed metal insulated frogs and points
- Metal frog can be powered if desired
- UV compatible: great for both indoor and outdoor use

Item #7081 - 45° Crossing

Item #7090
Terminal Joiners (1 pair)

Item #7056 - 2-Rail
40" Flex-Track® with
Simulated Wood Ties

Item #7050 - 10" Straight
